This resource is additional material to the Learning to Program in C resource.

From C to C++

1. What is OOP? 2
Background to OOP 2
OOP model of computing 2
Development of OO languages 3
General principles 3

2. New features of C++ 5
Classes 5
New and Delete operators 6
Streams and File I/O 6
Reference variables 7
Function Overloading 8
Boolean Values 9
Task 9

3. Encapsulation 10
Concept of Encapsulation 10
Keywords 10
Example 11

4. Inheritance 13
Concept of inheritance 13
Inheritance in C++ 13
Virtual Functions 14
Other Kinds of Inheritance 15
Constructors and Destructors 15
Example (continued) 15

5. Polymorphism 18
Concept of Polymorphism 18
Polymorphism in C++ 18
Example (continued) 19

6. Templates 20
Need for Templates in C++ 20
Templates in C++ 20
Templates and Polymorphism 21
Example (continued) 21

7. Operator overloading 24
Need for Operator Overloading in C++ 24
Operator Overloading in C++ 24
Operator Overloading and Polymorphism 25
Example (continued) 25
Task 26

8. Miscellaneous 27
Static Member Variable and Functions 27
Coercion and Implicit Type Conversion 27
Templated Member Functions 28
Helper Classes 28
Class Typedefs 29
Function Objects 29
STL 30
