Page	Contents
2	An Introduction to Turbo Pascal
3	The Components of a Turbo Pascal Program
4	Getting Acquainted with the Turbo Pascal Environment
5	Writing and Running Programs
6	Saving Programs
7-8	Getting Further Acquainted with the Turbo Pascal Environment
9	The Program Heading
10	Identifiers
11-12	Variables and Data Types in Turbo Pascal
13	Strings
14-15	Program Flowcharts
16	Assignment and Equivalence
17-21	The Write and WriteLn Procedures
22-23	The Read and ReadLn Procedures
24-25	Improving the Readability of our Programs
26	Constants
27-29	Making Decisions - The IF Statement
30-31	Making Decisions - The CASE Statement
32-34	FOR ... DO Loops
35	Calculating an Average using the FOR ... DO Loop
36	Nested FOR ... DO Loops
37	WHILE ... DO Loops

These sheets may only be copied by the purchasing institution for their own use.

Teacher Introduction

This pack has been designed for those who want to learn to program using Turbo Pascal. The level of this guide is approximately that required for Advanced Level Computing. This guide really has two aims: teaching pupils how to program and how to use Turbo Pascal.

It has been designed as a self-learn pack for use by individuals or by ICT teachers in the classroom. It is suggested that pupils work through each sheet and then apply what they have learnt where relevant. It is the practice, not the learning, which will help pupils in the long run!
