Teacher's Introduction

This resource has been produced to support teaching and learning of the BTEC Tech Award Digital Information Technology specification from September 2022. The learning content is covered by the following sets of keywords with matching descriptions, which cover all of the subject content for Components 1, 2 and 3.

Component 1: User interface design / project planning

- *User interfaces* ^(A1)
- *User interface design; users and efficiency* ^(A2 - A4)
- *Project planning techniques* ^(B1)
- *Project planning and initial design* ^(B2 - B3)
- *Develop and review a user interface* ^(C1 - C3)

Component 2: Collecting, presenting and interpreting data

- *Data and information: characteristics, representation and processing* ^(A1 - A3)
- *Data and information: collection, quality, modelling and threats* ^(A4 - A7)
- *Data processing methods* ^(B1)
- *Produce a dashboard* ^(B2)
- *Draw conclusions and review data presentation methods* ^(C1 - C2)

Component 3: Effective digital working practices

- *Modern technologies* ^(A1)
- *Impact of modern technologies* ^(A2)
- *Threats to data* ^(B1)
- *Relational Databases and SQL*
- *Prevention and management of threats to data* ^(B2)
- *IT policy and responsible use* ^(B3, C1)
- *Legal and ethical* ^(C2)
- *Forms of notation* ^(D1)

For each set, there are a number of different keyword activities on CD designed to give you a range of different options for classroom, homework and revision. This variety enables you to take a different approach to different topics – such as using the Crosswords as homework for one topic, and the Match Up as a starter for another.

Alternatively, differentiate the activity for a given topic; for example, you might want to give your stronger students the **Crosswords** early on while you start weaker learners on the **Match Up** (where terms and definitions are both available). **Domino** and **Bingo** activities add an element of fun and reinforcement, as well as potential for pair and group work. Finally, the **Flash Cards** come into their own for revision and the **Table Fill** and **Write Your Own Glossary** allow students to test their understanding by correctly filling in keywords or definitions.

There is more information about the digital format and the different activities included on the following two pages.

Digital Format

All of the activities are provided electronically on the accompanying CD. To use on a school network/VLE, the entire contents of the CD needs to be copied and pasted to an accessible location.

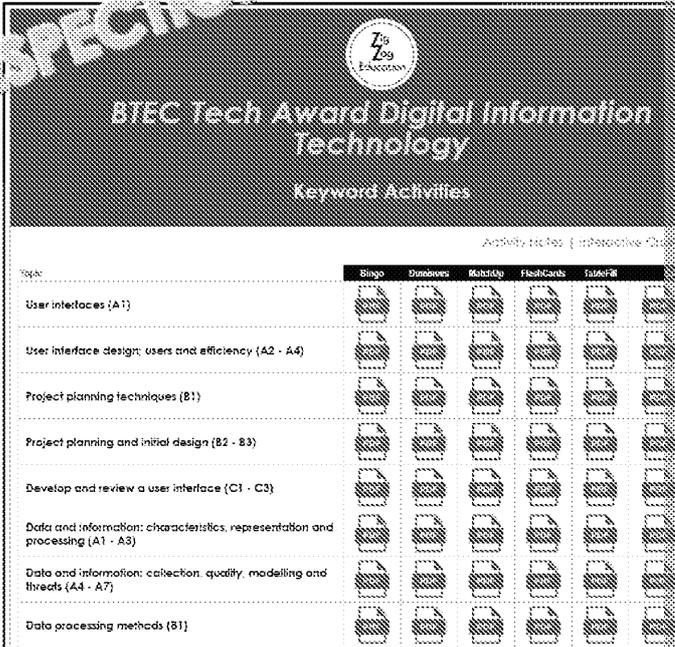

Providing easy access to the activities are two HTML menus:

1. Access All Menu

Location: [index.html](#)

This menu, designed primarily for teacher use, includes links to everything on the CD. You can easily select what you need when preparing your lessons.

If you intend to give learners access to this menu, be aware that it does not

Activity Types

All activities are provided as PDF files, allowing for easy printing and sharing on your VLE. In addition, each of the single-page activities (*Crosswords*, *Match-up* and *Table-fill*) are provided on paper too.

The activities included in this resource are as follows:

Bingo

Each student is given a different bingo card containing a selection of words from a topic. The teacher reads the definitions using the Keyword Answers, and the student must tick off the words on their card to complete rows, columns, and the full bingo card. The sets with 12 or more words.

Crosswords

These traditional keyword activities are equally effective as lesson or homework – and are also an excellent way of easing students into their revision programme.

In addition to the photocopiable worksheets and PDF, the crossword activities are also available in a web-based (HTML) format on the accompanying CD-ROM. These are web-based (HTML) and can be accessed using your Internet browser.

Dominoes / Loop Cards

This is essentially another match-up activity, but this one is designed to be used in a chain to engage students. It is recommended that students work in pairs or small groups.

Half of each card contains a keyword, and the other half contains a description. Students must align all the cards in the correct order. There is a 'Start' and a 'Finish' card. If a card is left outside the chain, then students have gone wrong somewhere.

Match-up

Students match descriptions to their keywords by drawing lines between them. If there are similar descriptions and keywords, students are likely to make the odd mistake while completing the activity, so it is recommended that they use a pencil to start with. Once they are confident with the keywords that they are familiar with, students can then think about and learn the new keywords with confidence.

Flash Cards

These are a helpful revision tool. To make the cards, fold the page in half, then cut them out and stick them together so the keyword is on one side and the definition the other. They could use these to play a game of pairs. Cut each card in two and place them all face down. Students will then take it in turns to turn over two cards with the aim of matching a keyword with a definition. If the cards are removed, and the game is finished when all the cards have been matched.

Glossary Builders

Table-fill

Nothing fancy – simply write the keyword which is being described, and the definition. Because this activity tests the students' own knowledge, it is best used as a homework activity at the end of each topic or during revision. This then tests whether they have grasped the key terminology for each topic. Alternatively, the tables could be used at the beginning of the topic, to see what they already know.

Write Your Own Glossary

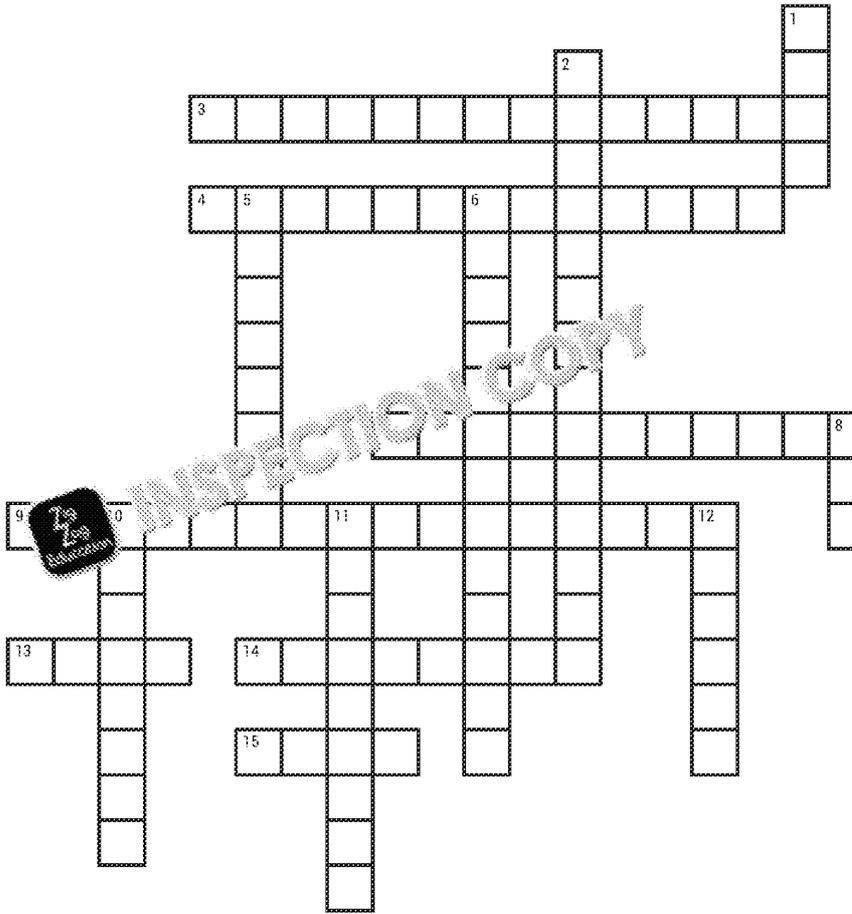

Like the Table-fill, this activity can be used to test students before learning a topic or as a revision tool after learning a topic. Students are given a list of the keywords and need to write their own definitions. Using Table-fill and Write Your Own Glossary, lessons can be differentiated.

User interfaces (A1)

Across

- 3 A computer system that forms part of a larger electronic device (8,6)
- 4 Software that allows interaction between the user and digital devices (4,9)
- 7 An electronic system that manages another system or equipment without the need for human input (11,6)
- 9 Conditions that the client needs the product to be able to meet (4,12)
- 13 An aspect of a user interface which enables the user to input data (4)
- 14 The physical parts that make up a computer system (8)
- 15 A list of words (e.g. at the top of a page) that when clicked/selected allow the user to select options to be selected (4)

Down

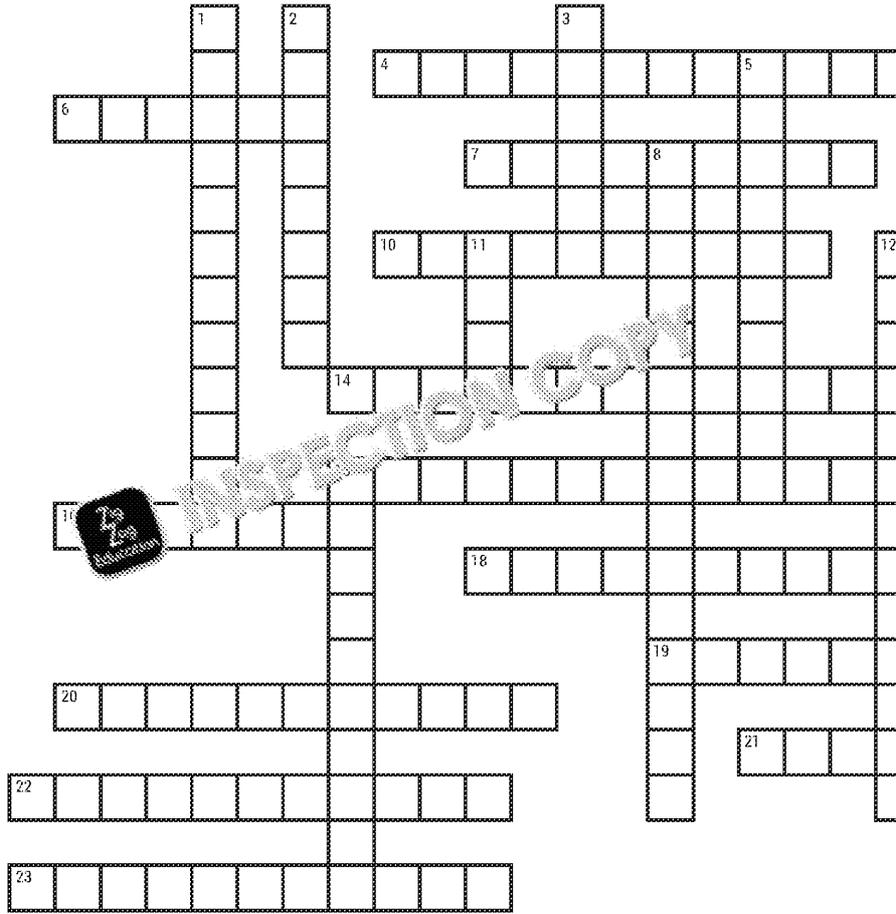

- 1 Acronym for window (3)
- 2 Refers to the quality of a particular website (4,5)
- 5 Enables users to create something (4,5)
- 6 Non-graphical interface (4,9)
- 8 Acronym for any type of computer system (3)
- 10 Newly developed forms of input (4,5)
- 11 Human interaction using keyboard and mouse and gestures (4,5)
- 12 Device designed to make changes (6)

User interface design; users and efficiency (A2 - A4)

Across

- 4 More than one key pressed at the same time to perform an action on a computer, e.g. Control + C for copy (8,8)
- 6 The way that text, graphics, buttons and other parts of the user interface are arranged on screen (6)
- 7 Some users have ____ needs for software design; for example, those with developmental delays or other learning disabilities (9)
- 10 Presentation standards used for all documents produced by an organisation (5,5)
- 13 Small, clickable images, representing real-world objects, used in user interfaces (5)
- 14 Letting the user know that what they've done has been recognised by the system - a tick or a success box might appear (11,8)
- 15 Words or numbers that are pre-populated on a form (but can be changed); for example a country code for a mobile phone number (7,6)
- 16 A rough or smooth paper surface, a type of ____ on-screen effect to make the page appear like for example, lined or crumpled paper, etc. (7)
- 18 A trail on a web page, showing each level that you have visited, e.g. home > products > fiction (11)
- 19 Recognisable shapes and characters which give meaning; for example a green tick is often used to indicate a strong password (7)
- 20 Particular subsection of a population (e.g. by age, income level, location, etc.) (11)
- 21 Areas of the screen without text or images, required so that the information on the screen is readable and uncluttered (5,5)
- 22 A box within an interface or web page that a term or phrase is typed in entered in order to find relevant results (6,5)
- 23 Ensures that each page within an interface has the same layout, headings and style so that it is easy to navigate, and looks professional (11)

Down

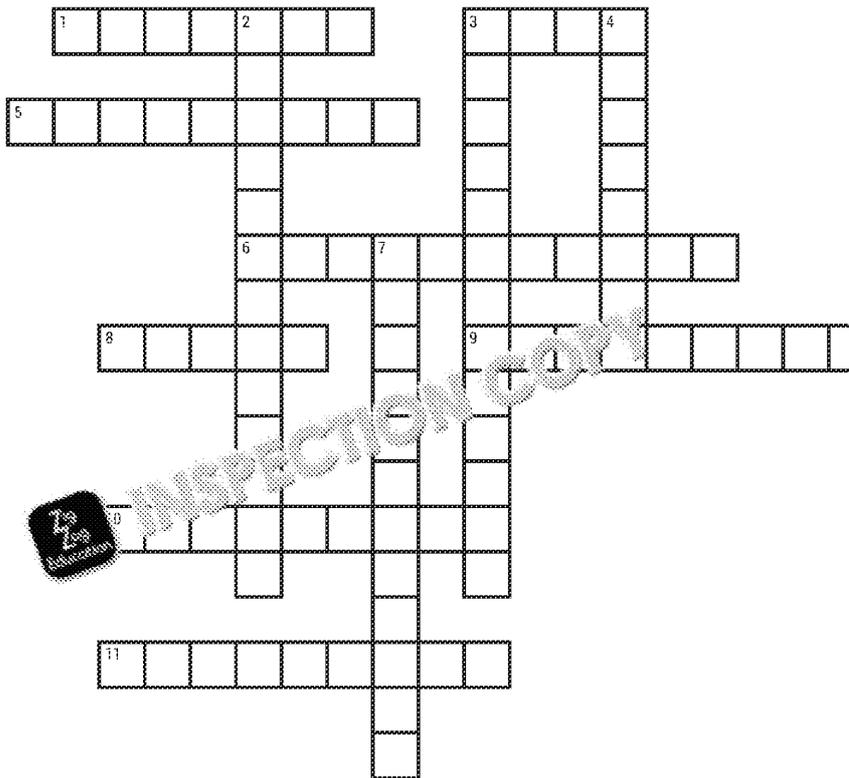

- 1 When a button on a menu shows more selectable items (4,3)
- 2 Function that populates a list with the user needing to type in a search term (6,5)
- 3 An on/off switch, for a menu (6)
- 5 Expert, regular or novice user of the software or interface (5,5)
- 8 A system is created that is easy to use as obvious icons, help text, etc. (6,5)
- 9 A small square or circle that a user clicks on (4,3)
- 11 If you change something, you can reveal the original (6,5)
- 12 How hardware and software are used so that they are easy to use with ease (13)
- 15 Type of font which looks like a small screen (10)
- 17 Type of font which is simple and clear (4,5)

Project planning techniques (B1)

Across

- 1 Visualisation that shows the main objective and branches off into each of the sub-objectives and the tasks that need to be carried out to complete them (4,3)
- 3 Visual representation of a project's milestones, and the tasks that need to be done to reach one milestone after another (4)
- 5 Methodology where each stage is assessed in a cycle and if not correct or needs further work, goes back to a previous stage (9)
- 6 Mind map expanded with text in order to provide greater detail about each task (11)
- 8 Iterative methodology where smaller aspects of a project are prioritised into stages, allowing the client to request changes throughout (5)
- 9 Visual representation of when tasks need to be performed and how much time each task will take (5,5)
- 10 Type of methodology where the tasks are linear - one after the other, not iterative (9)
- 11 A visual display of images, themes, colours, etc. normally on a single piece of paper; can be constructed physically or digitally (4,5)

Down

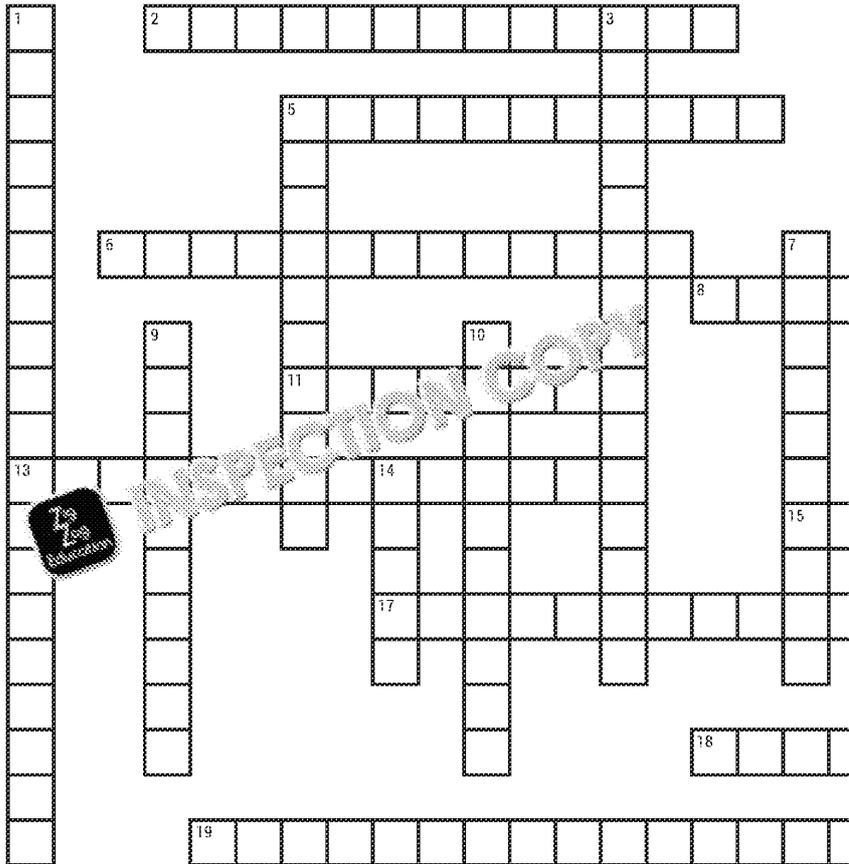

- 2 The tasks completed could have a clear end point
- 3 A wide range of strategies to manage a project
- 4 Written series of tasks completed - e.g. Gantt chart (4,4)
- 7 The sequence of tasks that will lead to the project completion

Project planning and initial design (B2 - B3)

Across

- 2 Graphical representation of how a product should look or be used (e.g. a sketch or storyboard) (13)
- 5 Taking into account risks when planning so that setbacks can be handled (11)
- 6 How well a product caters to users with additional needs (13)
- 8 A well-designed application or interface will make people want to use it, and they will pay ____ to it (9)
- 11 Person or people who the final product could be aimed at (8)
- 13 If the person or people for whom the product was developed is/are comfortable using the product and can easily use it without excess help or feeling patronised (4,10)
- 15 The data processed by a computer system that gives the user the information they require (6)
- 17 Considerations that the client needs to discuss with the developer to ensure that new systems successfully operate the system or software (12)
- 18 A visualisation of a product - e.g. how it should look; where the different components, icons and menus should be located (6)
- 19 A complex application or interface will need a lot of learning in order to master it and, therefore, _____ of how to use it (11,9)

Down

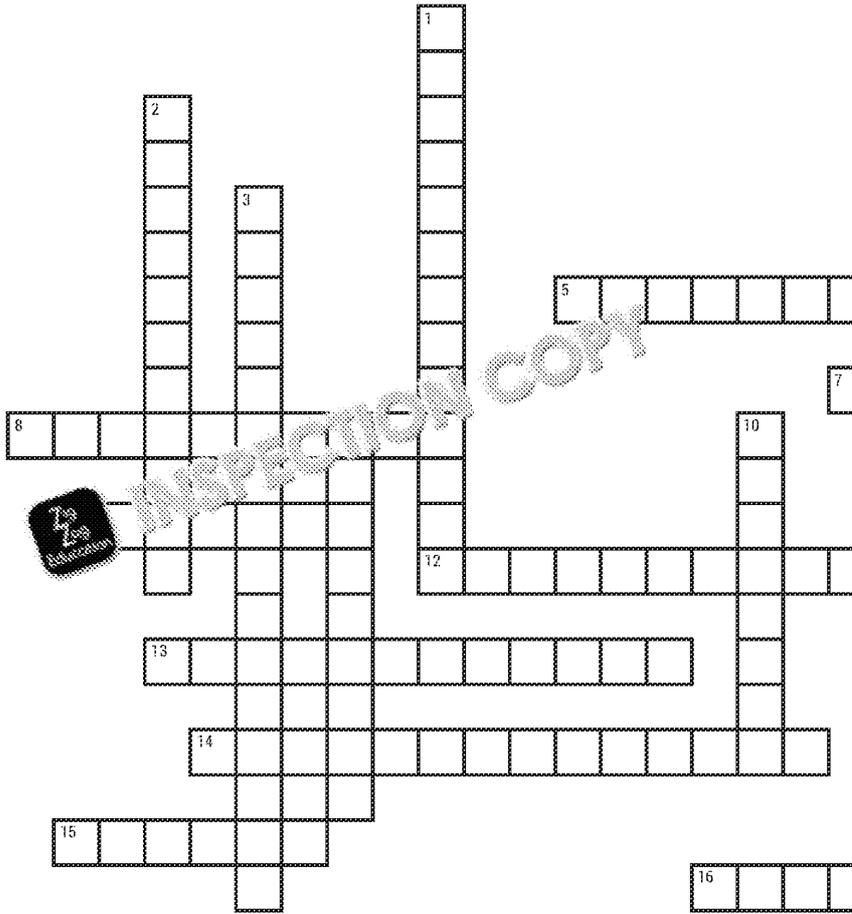

- 1 Everything that makes up a project such as who is involved, what the outputs are (7,12)
- 3 At the end of a stage, a product is either successful or refined for the next stage for improvement (10)
- 4 Important stage in the development process (10)
- 5 A limiting factor with a project such as lack of expertise or other resources (5,5)
- 7 Series of sketches used to develop a product (10)
- 9 Objectives set for a project that are achievable and realistic (5,5)
- 10 Task that can't be completed because it is not yet complete (10)
- 12 The schedule for a project and that bugs are fixed during the development process (4,8)
- 14 The ways that a user can enter data, such as keyboard, mouse, touch screen (5)
- 16 The expected length of a project (9)

Develop and review a user interface (C1 - C3)

Across

- 4 Visual and behavioural aspects of a user interface (4,3,4)
- 7 Small part of or an ability within an application or interface that is useful, e.g. printing or other services (7)
- 8 Improvement to an application or interface based on user feedback or testing (10)
- 11 On-screen, tactile or auditory messages provided to the user from the interface (7)
- 12 The way that a user interacts with the product in order to click or select, and move from one screen to another (10,6)
- 13 Comments, criticisms and suggested improvements provided by the people using the product (4,6)
- 14 Improvements discovered during the development of a project that can be applied to the next project in a better way or more efficiently (7,7)
- 15 Touch, mouse clicks and typed characters from the user in order to interact with the interface (6)
- 16 The reasons for the development of the interface, and the different aspects within it (7)

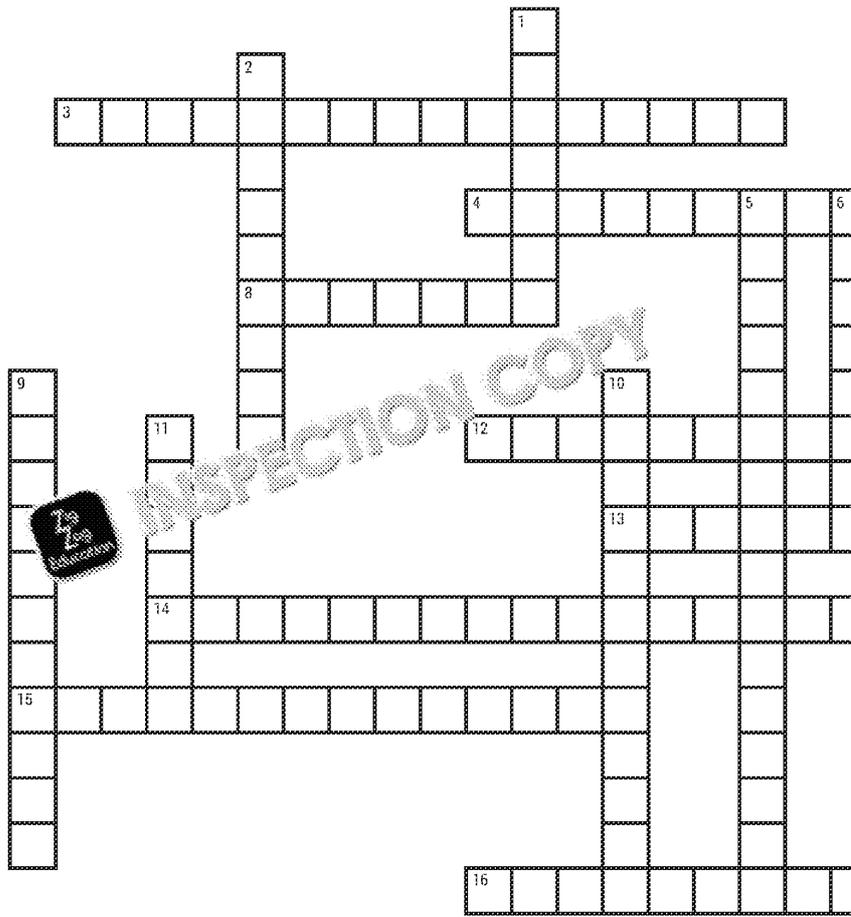

Down

- 1 Written evidence, works, and the user interface developers (13)
- 2 Limitations placed on development time that the interface must meet (7)
- 3 Needs of those who will be using the interface (7)
- 4 Method of refining the interface based on feedback from test users (7)
- 6 The collection and analysis of user requirements (7)
- 9 How complicated the interface is (7)
- 10 The users of the interface and their needs, skill levels (7)

INSPECTION COPY

Across

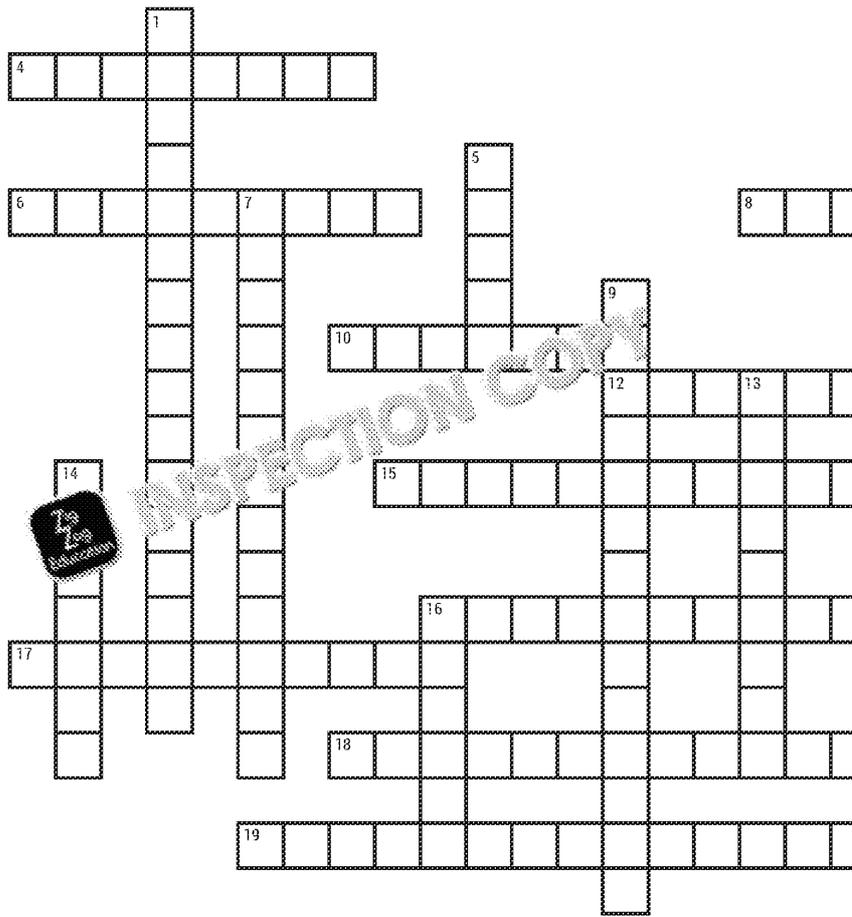

- 3 Method of refining a user interface following rounds of feedback from testers including that the tester / client approves of the changes (9,7)
- 4 Written evidence of changes to the interface, how it works, and the underlying code to teach users and future developers (13)
- 8 Small part of or an ability within an application or interface that is useful, e.g. printing or other services (7)
- 12 Limitations placed upon on the interface such as development time (budget) and hardware or software that the interface runs upon (11)
- 13 Improvement to an application or interface based on user feedback or testing (9,7)
- 14 Needs of the user to operate the interface, such as performing relevant tasks in an intuitive way (4,12)
- 15 Improvements discovered during the development of a project that can be applied to the next project in a better way or more efficiently (7,7)
- 16 Visual and behavioural aspects of a user interface (4,3,4)

Down

- 1 The reasons for the different aspects of the interface (10,6)
- 2 How complicated the interface is (7,7)
- 5 The way that a user interacts with the interface, such as click or select, and touch (10,6)
- 6 The users of the interface and their needs, skill levels (7,7)
- 7 Touch, mouse click or keyboard in order to interact with the interface (7,7)
- 9 The collection and analysis of user feedback while working on a project to deliver the user interface (7,7)
- 10 Comments, criticisms and suggestions provided by the user (10,6)
- 11 On-screen, tactile elements that help the user from the interface (7,7)

**COPYRIGHT
PROTECTED**

Across

- 2 Device designed to collect data from environmental changes (6)
- 4 Measure of how correct data is (8)
- 6 Analysing data sets to see whether there are relationships between them, or seeing how changing a component affects the outcome or forecast (9)
- 8 Data collected by someone else (third party) for a different purpose, e.g. customer data from a retailer provided to an advertiser (9)
- 10 Data sets that are too large to be processed by conventional means (3,4)
- 11 Measure of how old data is (3)
- 12 Collective term for a range of issues posed by data, such as invasion of privacy, and fraud when sensitive data is stolen (7)
- 15 The way that the data has been obtained - e.g. survey, interview, panel, focus group, feedback form, online form (10,6)
- 16 Measure of how comprehensive data is (12)
- 17 The number of data sets that have been collected, e.g. the number of people who data has been collected about (6,4)
- 18 Retailers do not keep much spare stock on site. Instead, stock levels are constantly monitored, and items are sent to the store when they are about to run out. (4-2-4,8)
- 19 Felt when businesses appear to build up a substantial profile about our personal lives or habits, or ask us for substantial personal data (8,2,7)

Down

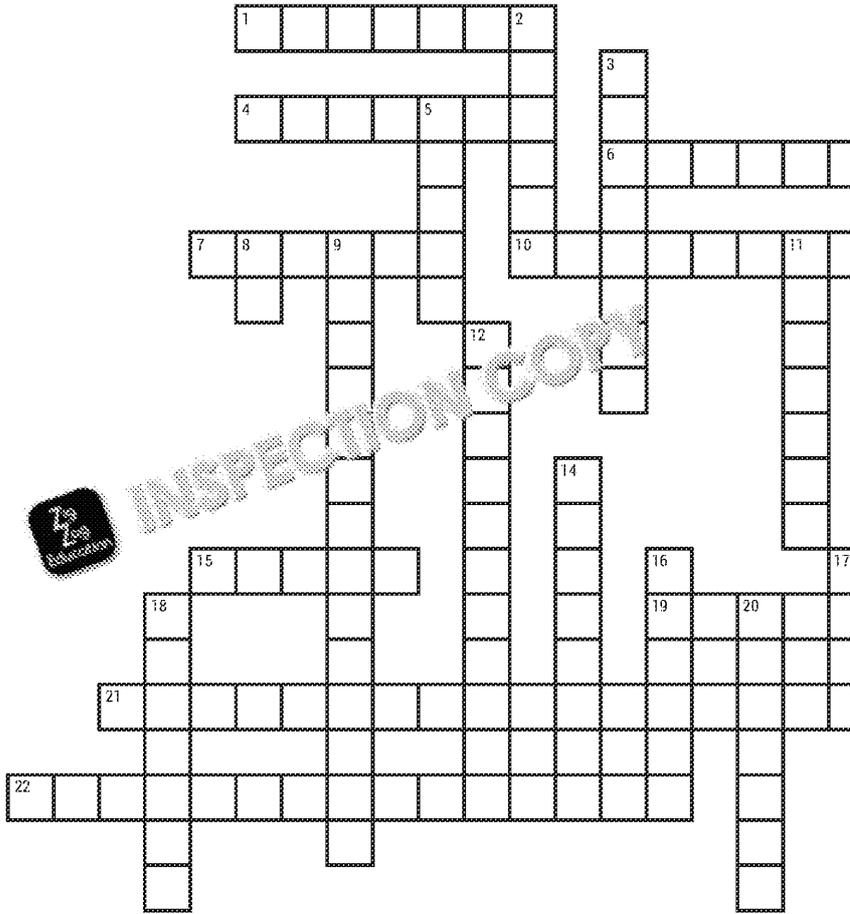

- 1 Types of people who are involved in the commissioning of fraud, such as those who are involved in the commissioning of fraud (10,6)
- 2 The organisation that provides data to the education, finance and health sectors (6,7)
- 3 An online platform that allows people to share updates, connect with each other (6,7)
- 5 Wrongful or criminal activity for personal gain, e.g. identity theft (5)
- 7 Rewards program that encourages customer purchases (6,7)
- 9 Methods used to collect data that did not exist before, or collected for a different purpose (6,7)
- 13 Online shopping and delivery services that are delivered to your home (6,7)
- 14 New data collected from a group of people completing a door-to-door survey (7)
- 16 Large-scale, official data collection across the country - usually to monitor economic activity (12)

Data processing methods (B1)

Across

- 1 Function that returns the number of cells in a given range that satisfy a given condition (7)
- 4 Type of operator that involves arguments or reasoning; NOT, AND and OR are examples (7)
- 6 When a function is run on a block of text, e.g. left or right (6)
- 7 Rows or columns that have been removed from view from the user, but remain in the spreadsheet (6)
- 10 Type of cell reference that changes when a formula is copied or moved to another cell (8)
- 15 Function that adds all numbers in a range of cells that satisfy a given condition (5)
- 19 A set of actions that can be recorded or coded to automate tasks that are repeated often (5)
- 21 Colour coding, data bars, etc. automatically generated based on the value or contents of a cell, allowing fast visual analysis of data (e.g. turn cell red if value >90%) (11,10)
- 22 A spreadsheet can be made up of multiple sheets. A formula in one sheet can pull through data from a different sheet. (6,9)

Down

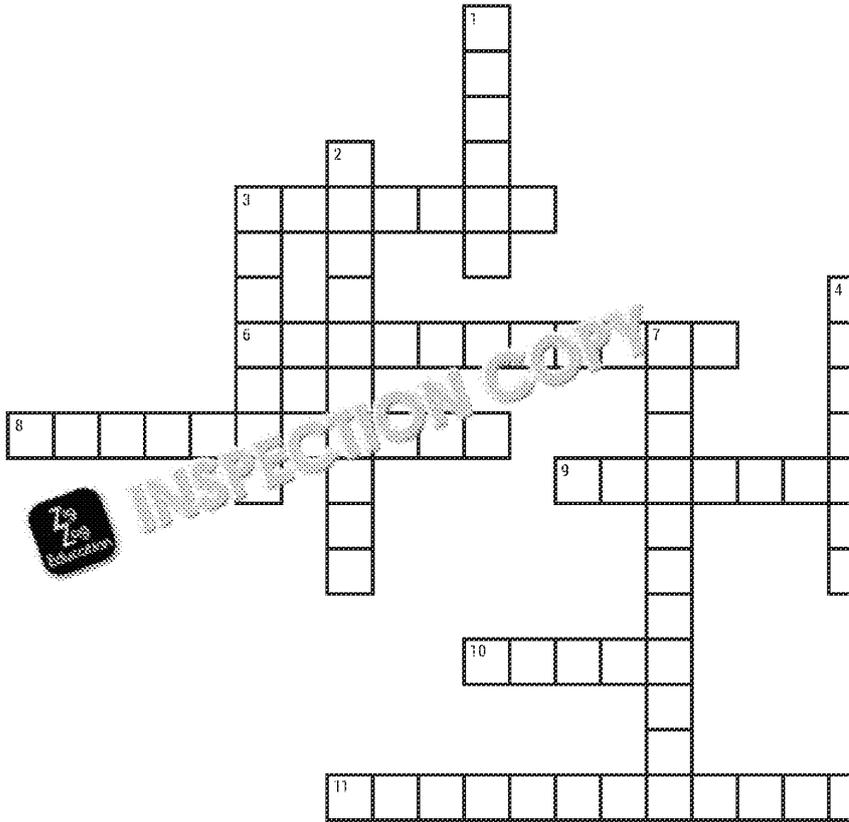

- 2 Reducing the amount of cells in a column which are not blank (5)
- 3 Type of cell reference copied or moved to a new location (5)
- 5 Function that adds up cells that are not blank (5)
- 8 Carries out one action or an alternative action (5)
- 9 Involves testing that a condition is true or false (4,10)
- 11 Function that returns the value of the cell in the same row as a given cell (5)
- 12 The header row or first row of the spreadsheet you are working on (6,5)
- 13 Function that adds up cells that are blank (10)
- 14 Expressions that set the format of data within the spreadsheet (5)
- 16 Copy data between different sheets or the Internet into a worksheet (5)
- 17 Arranging a column of data by smallest to largest (5)
- 18 Function that returns the value of the first row in a specified range (5)
- 20 A note giving further information about a spreadsheet (7)

INSPECTION COPY

Produce a dashboard (B2)

Across

- 3 Values can be changed by pressing up or down arrows - e.g. volume control (7)
- 4 Heading at the top of a page, section of a document or chart which indicates what the text or chart is going to cover (5)
- 6 Presentation of the key data on a dashboard (such as totals, subtotals or other synopsis), allowing it to be seen immediately (4,7)
- 8 Values out of 100 - e.g. a dashboard might say that 75% of yesterday's customer calls were answered within five minutes (11)
- 9 Found next to the horizontal and vertical axes on a graph so that we know what is being shown and any units (e.g. hours) and number of people) (4,6)
- 10 The total number of specified cells that contain some data; can be represented on a dashboard (5)
- 11 When a button on a menu is pressed or clicked, the menu expands to show more selectable options (8,4)

Down

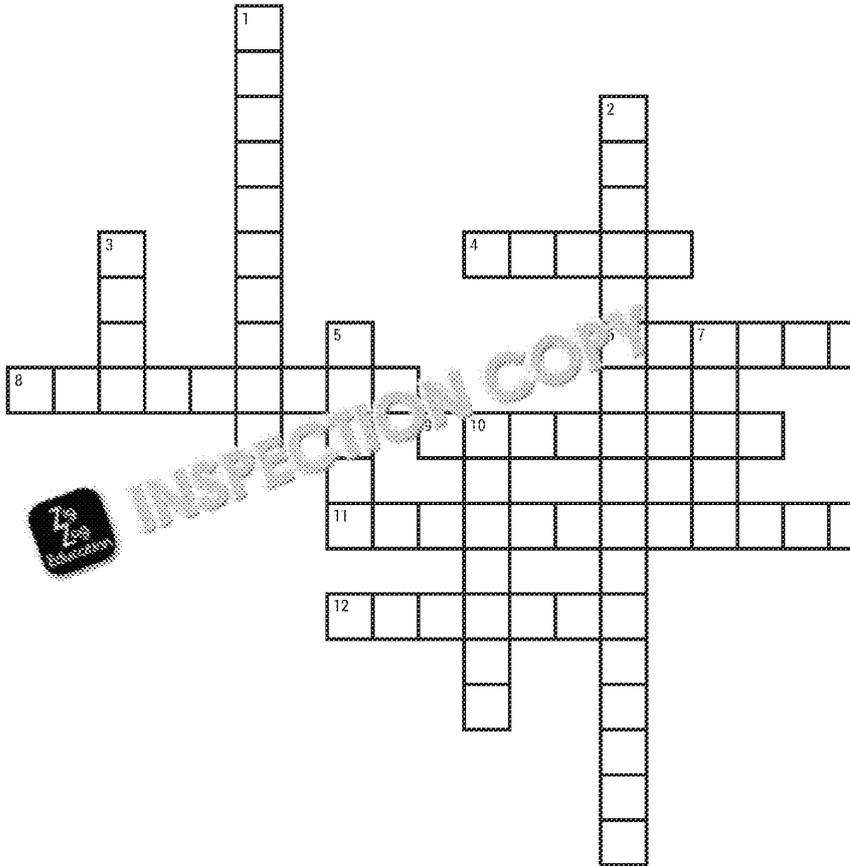

- 1 The outline around a button which can be changed, or it can be removed (4)
- 2 Table in a spreadsheet which is used for data analysis (5,5)
- 3 The colouring, shading or background of a button (7)
- 4 Square or circle that is used to select a cell within it (4,3)
- 5 Sum of all data in a table (5)
- 7 Used where there are multiple options from which a single option is chosen (4)

Modern technologies (A1)

Across

- 2 Small on-screen message alerting the user to some information, for example, a software update becoming available (13)
- 4 Using online services instead of local applications, e.g. editing a document from a web browser (5,9)
- 6 Area without mobile phone coverage - e.g. a valley surrounded by high mountains (5,4)
- 8 Ensuring that services and systems are working as expected and at the right speed (11)
- 11 Controlling what permissions each user (or group of users) is given (e.g. allowing only admins to access certain folder) (6,6)
- 13 When files and applications on two devices are updated to match, so that both devices have the same content (15)
- 14 Set of procedures used after a significant event such as a fire, flood or ransomware attack causes major business disruption (8,8,6)
- 15 If a new system does not work with existing software it has failed what sort of test? (13)
- 16 If, when evaluating a system, it is found not to be able to deal with an increase in workload, it has failed what sort of test? (11)

Down

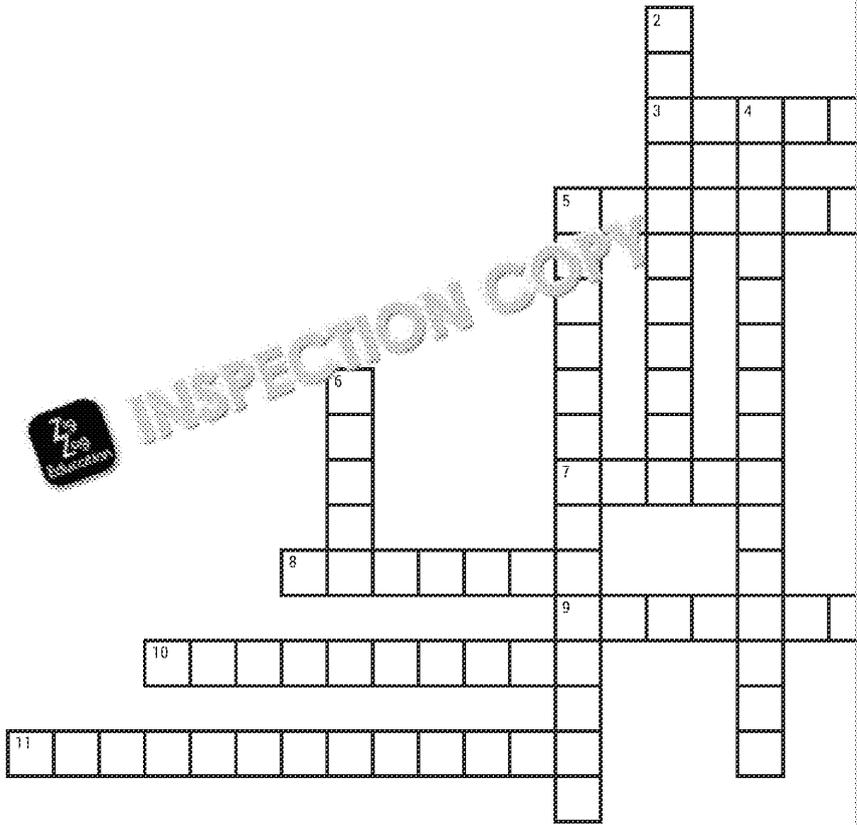

- 1 Data storage technology where servers accessed
- 3 Software that allows users to work online or share a resource simultaneously
- 5 Process of monitoring system performance and replacing or updating components (11)
- 7 A temporary wireless network created using a mobile device
- 9 Processes and procedures used to prevent hackers from accessing a system (malware) (4,8)
- 10 Sharing of a mobile device's data with another device
- 12 A wireless Internet connection, e.g. provided by a mobile phone (and may have no internet access)

PROTECTED**

Impact of modern technologies (A2)

Across

- 3 Travel to and from your place of work - eliminated when working from home! (7)
- 5 Software for setting up the tasks for a project, allowing for teams to manage their time, helping to ensure that milestones and targets are achieved (8,4)
- 7 Electronic form of messaging sent between individuals, employees, businesses and customers; sometimes with attachments or other media (5)
- 8 A collection of webpages hosted on the WWW to present information about an individual or organisation to its followers (7)
- 9 An application which narrates the content of a computer display, used by people with or without sight (6,6)
- 10 A group of people working on a shared project who are located in different locations and, therefore, time zones and cultures (5,5)
- 11 Working away from the office such as at home (6,7)

Down

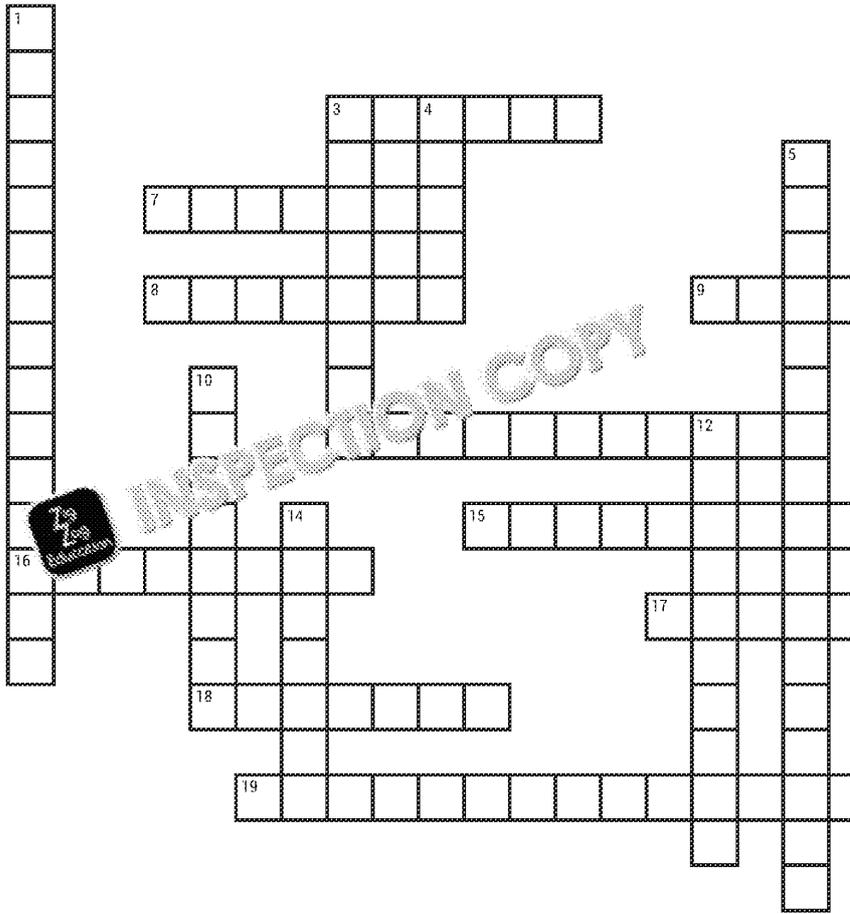

- 1 A description of a book that tells readers what they can read
- 2 Online platforms which facilitate the building of online communities
- 4 For most people, the internet is a relief from their busy lives
- 5 Otherwise called instant messaging, it is used between two users
- 6 Form of spoken communication used on the phone, or VOIP

PROTECTED**

Threats to data (B1)

Across

- 3 A network of computers infected with malicious software, often responsible for carrying out DDoS attacks and sending spam (6)
- 6 Malware that spreads by injecting its code into other files on the computer system (5)
- 7 Software that collects data from a computer system (7)
- 8 Collection of software that hides its existence (or the existence of other software) and enables access to restricted parts of a computer system (7)
- 9 Impersonating a trusted person or organisation in order to steal data or manipulate the user of a system (8)
- 11 Malware that pretends to function as legitimate software (7)
- 15 Spying on governments and businesses to obtain secrets / trade secrets / intellectual property, information, access and data theft by hackers (9)
- 16 Type of threat that occurs within an organisation, for example, an employee unintentionally installing a virus (8)
- 17 The duration that systems are not operational, e.g. if taken offline to investigate a security breach (8)
- 18 When an employee deliberately discloses confidential information outside of their organisation (7)
- 19 Attack whereby a website or network is flooded with traffic in a deliberate attempt to bring it down (6,2,7)

Down

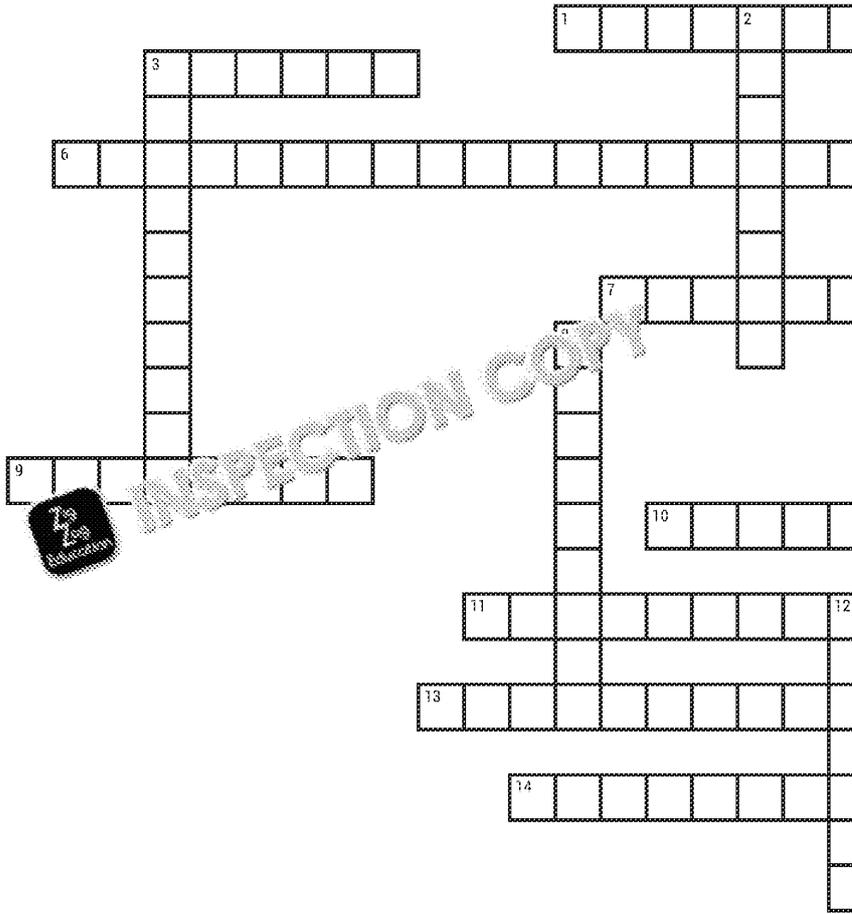

- 1 Watching someone enter data into a system (8,7)
- 2 Type of attack that involves redirecting a user to a fake website (8)
- 3 Hacker who attempts to gain access to a system for reasons to steal data (7)
- 4 Stealing of data from a system (internal threat) or from a user (7)
- 5 Manipulating the user to gain unauthorised access (7)
- 10 Type of threat posed by a hacker, for example a hacker (7)
- 12 Malware that restricts access to a system to make the user aware of a security breach (7)
- 13 Malware that replicates itself to a computer system (7)
- 14 Malicious software that is designed to damage or disrupt access (7)

INSPECTION COPY

Prevention and management of threats to data (B2)

INSPECTION COPY

Across

- 1 Hardware- or software-based security which controls incoming and outgoing network traffic based on predefined rules (8)
- 3 Copy of data that can be used to restore data if the original copy is lost, corrupted or destroyed (6)
- 6 Using more than one characteristic in order to verify a transaction - such as sending a text message or email, or requiring a card / card reader (3-6,14)
- 7 Restoration of files from backups following a malware attack or a failed drive is called ____ ____ (4,8)
- 9 Sequence of characters needed to gain access to a system (8)
- 10 Scrambling data so that it can only be read by users with the appropriate translation 'key' (10)
- 11 General term applied to devices which have been designed or modified to prevent intrusion by hackers or malware (9)
- 13 The protection of digital devices from physical threats such as theft, e.g. a biometric door lock (8,8)
- 14 Testing the security of a system by attempting to break into it with the owner's permission (7,7)

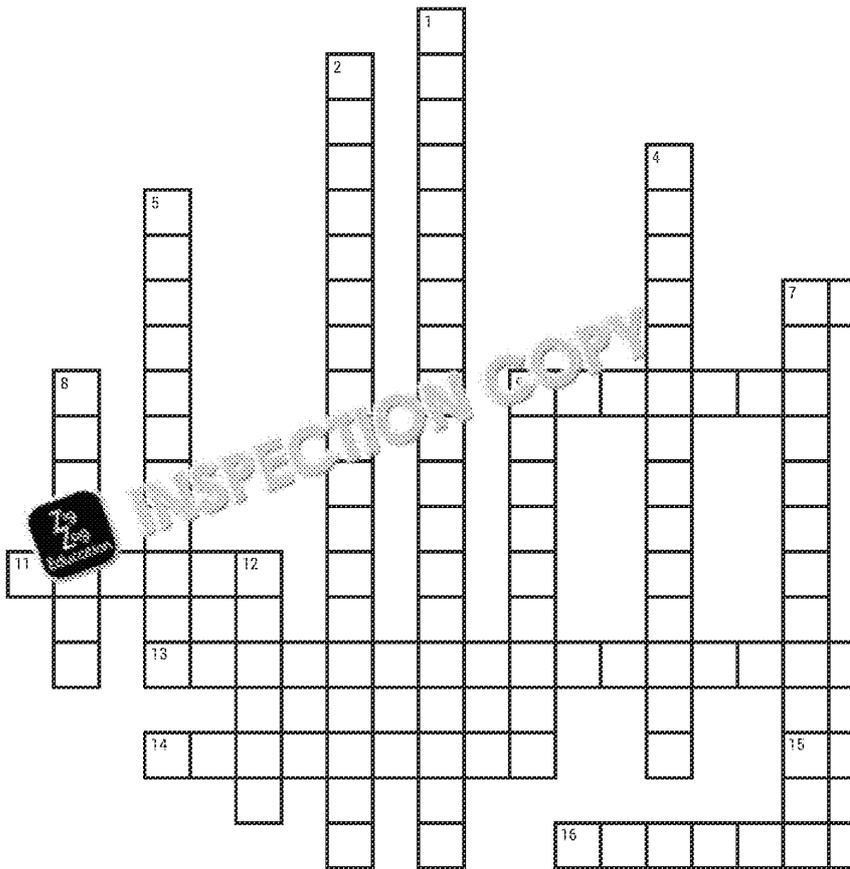

Down

- 2 A security expert who identifies vulnerabilities in a system and fixes them (7,7)
- 3 Use of personal identification on a mobile device, e.g. fingerprint (7,7)
- 4 If you need to type a password, it might appear pre-filled with the user's address before (7,7)
- 5 Process of testing a system to see if a hacker could exploit a weakness (7,7)
- 8 Software used to protect a system from unauthorized access (7,7)
- 12 Hacker who attacks systems - doesn't own them, but without permission (7,7)

**COPYRIGHT
PROTECTED**

IT policy and responsible use (B3, C1)

Across

- 7 After an attack, the company needs to ____ - telling stakeholders and authorities (e.g. the ICO) what happened (7)
- 9 After an attack, businesses ____ by implementing their disaster plan and taking remedial action (7)
- 11 After an attack, companies need to ____ it - by containing the problem and implementing suitable procedures (6)
- 13 Method of sharing and making document/information accessible via email, online, etc. without printing it (10,12)
- 14 Process where existing technology is replaced with newer or higher-performance technology (9)
- 15 The last phase after an attack - updating procedures and policy to ensure that an attack is less likely to happen again (7)
- 16 Settings that reduce energy used by a device - e.g. dimming and switching off the screen - e.g. automatically if device not used for a while (5,8)

Down

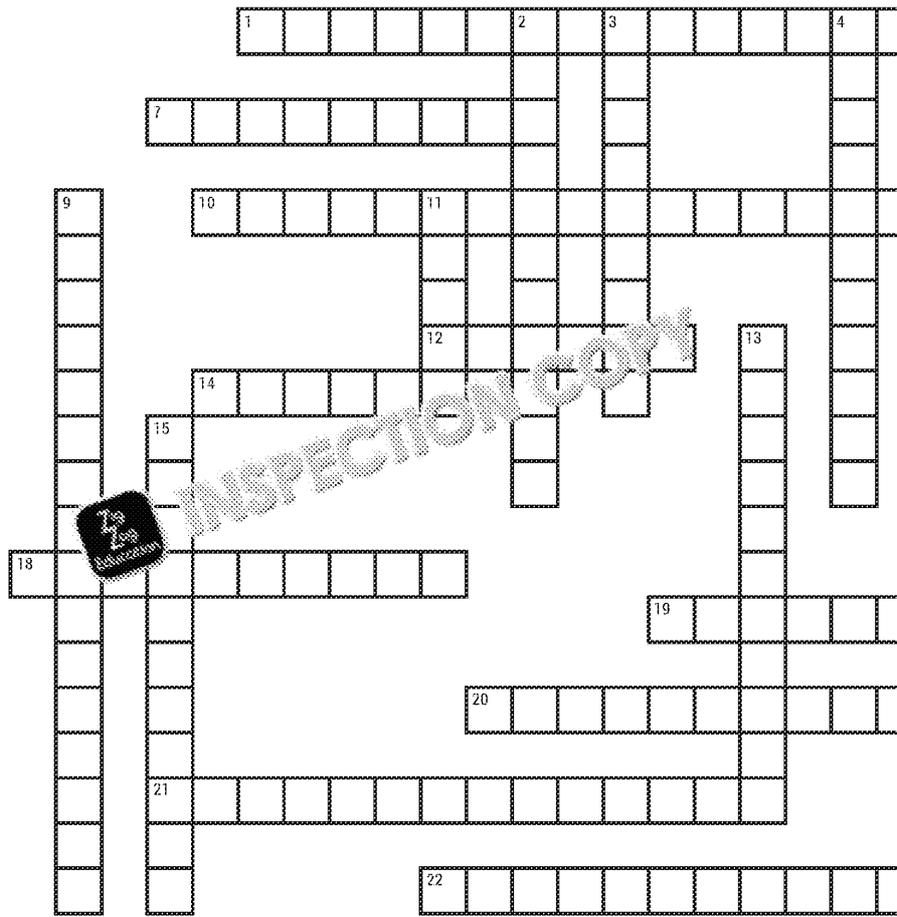

- 1 Set of rules which control a computer system (6)
- 2 Apps and programs installed on its computers and mobile devices (7)
- 3 Term for a document or file (6)
- 4 Length, numbers and characters determined by the user (6)
- 5 After an attack, the company needs to ____ - telling stakeholders and authorities (e.g. the ICO) what happened and how it happened (7)
- 6 Material left over from a process - e.g. paper - which is disposed of (5)
- 7 Metals and minerals, and other goods, only found in a specific geographical area (7)
- 8 Increased digital storage has led to concerns about ____ (6)
- 9 When a device can't work properly - slow or old, or because of a virus (6)
- 10 Term used to describe a person's behaviour - e.g. the way they use their personal data (6)
- 12 Various forms of personal data - e.g. text messages - which are sent, stored and disposed of (6)

User interface design; users and efficiency (A2 - A4) (Match Up)

1	A box within an interface or web page that a term or phrase is typed in entered in order to find relevant results
2	A rough or smooth paper surface, a print effect, or an on-screen effect to make the page appear like fabric, stone or crumpled paper.
3	A small square or circle that can be clicked to select an option within a user interface
4	A system is created that is easy to use without much learning – such as obvious icons, help features and consistent layout
5	A trail on a web page showing the path level that you have visited, e.g. home > products > books > fiction
6	An on/off switch, for example, to enable or disable a particular setting
7	Areas of the screen without text, images, required so that the information on the screen is readable and uncluttered
8	Ensures that each page within an interface has the same layout, headings and style so that it is easy to navigate, and looks professional
9	Expert, regular or novice – not everyone will be as familiar with using the software or interface
10	Function that populates previously used data into web forms to save the user needing to type it in full
11	How hardware and software is designed for people with disabilities to use with ease
12	If you change something by mistake or you wish you hadn't made the change, you can reverse the change
13	Letting the user know that what they've done has been recognised by the system – a tick or a success box might appear
14	More than one key pressed at the same time to perform an action on a computer, e.g. Control + C for copy
15	Particular subsection of a population (e.g. by age, income level, location, etc.)
16	Presentation standards used for all documents produced by an organisation
	Recognisable shapes and characters which give meaning: for example a green tick is often used to indicate a

Project planning and initial design (B2 - B3) (Match Up)

1	A complex application or interface will need a lot of learning in order to master it and, therefore, _____ of how to use it
2	A limiting factor within a project; for example the time, expertise or other resources available
3	A visualisation of the end product – e.g. how it should look; where the different components, icons and menus should be located
4	A well-designed application interface will make people want to use it, and they will pay _____ to it
5	At the end of a stage, the success of a project is measured; if not successful or refinement is necessary, the project goes back a stage for improvement
6	Considerations that the client needs to discuss with the developer to ensure that people can successfully operate the system or software
7	Everything that must be considered and incorporated into a project such as what the users need and the inputs and outputs
8	Graphical representation of how a product should look or be used (e.g. a sketch or storyboard)
9	How well a product caters to users with additional needs
10	If the person or people for whom the product was developed is/are comfortable using the product and can easily use it without excess help or feeling patronised
11	Important stage in a project's timeline
12	Objectives set for the project that are specific, measurable, achievable and realistic, and have a well-defined timescale

Data and information: characteristics, representation and processing (A1 - A3) (Match Up)

1	A diagram showing the relationship between values
2	Columns and rows of labelled data that can include numbers and text to present information in context
3	Combination of text and diagrams to present or summarise information or a process in a graphical way that is easy to understand
4	Data that has been processed and whose meaning can be understood and has context
5	Data type used to store a string of characters
6	Entering data more than once to ensure the entries are the same
7	Form of validation where an entry is compared against values in another table
8	How information becomes an output from data
9	If data has both structure and context we can infer the ----
10	Integers, fractions and decimals are examples of this type of data
11	Method of verification where two sets of input are entered; the computer checks that both sets match each other and if not reports any errors
12	Process of checking that the input conforms to predefined rules
13	Raw unprocessed numbers or text with no meaning or context stored on a computer system
14	Text is checked through for mistakes - typos, poor grammar or unclear meaning - by a person, who then corrects any problems

Data and information: collection, quality, modelling and threats (A4 - A7) (Match Up)

1	An online platform where users connect with other people to share updates, comments and photos, and send messages to each other
2	Analysing data sets to see whether there are relationships between them, or seeing how changing a component affects the outcome or forecast
3	Collective term for a range of issues posed by data storage – such as invasion of privacy, and fraud when stored data is stolen
4	Data collected by someone other than the original source (third party) for a different purpose, e.g. customer data from a retailer provided to an advertiser
5	Data sets that are too large to be processed by conventional means
6	Device designed to collect data from environmental changes
7	Felt when businesses appear to build up a substantial profile about our personal lives or habits, or ask us for substantial personal data
8	Large-scale, official data collection about people living in a country – usually takes place once every 10 years in the UK
9	Measure of how comprehensive data is
10	Measure of how correct data is
11	Measure of how old data is
12	Methods used to obtain data – either new data that's never existed before, or data that someone else collected for a different purpose
13	New data collected for a purpose – such as a student completing a door-to-door survey, or the results of a focus group
14	Online shopping and transactions where products are delivered to your home, or downloaded as digital content

Data processing methods (B1) (Match Up)

1	A note giving further detail or an action linked to a cell in a spreadsheet
2	A set of actions that can be recorded or coded to automate tasks that are repeated often
3	A spreadsheet can have many different sheets. A formula in one sheet can pull through and analyse data from a different sheet.
4	Arranging a column of data into ascending or descending order - e.g. by smallest to largest or in alphabetical order
5	Carries out one action if a given expression is true, or else carries out an alternative action
6	Colour coding, data bars, etc. automatically generated based on the value or contents of a cell, allowing fast visualisation of the data (e.g. turning a cell red if value >90%)
7	Copy data between different places - e.g. from a spreadsheet, file or the Internet into a word processor or database, etc.
8	Expressions that set the value of a cell by connecting the various cells within the spreadsheet
9	Function that adds all numbers in a range of cells that satisfy a given condition
10	Function that adds up the number of cells that contain a value (i.e. are not blank)
11	Function that adds up the number of cells that do not contain a value (i.e. are blank)
12	Function that returns the number of cells in a given range that satisfy a given condition
13	Function that returns the value from a given column that is in the same row as a given value from another given column
14	Function that returns the value from a given row when a value from the first row is specified
15	Involves testing that the input conforms to set rules and is reasonable

Modern technologies (A1) (Match Up)

1	A temporary wireless network that does not rely on fixed hardware such as routers, e.g. a personal hotspot created using a mobile phone
2	A wireless Internet connection provided for public use - e.g. provided by a café or restaurant for its customers (and may have a password required to connect)
3	Area without mobile phone coverage - e.g. a valley surrounded by high mountains
4	Controlling what permission each user (or group of users) is given (e.g. allowing only admins to view a certain folder)
5	Data storage technology where data is stored on remote servers accessed from the Internet
6	Ensuring that services and systems are working as expected and at the right speed
7	If a new system does not work with existing software it has failed what sort of test?
8	If, when evaluating a system, it is found not to be able to deal with an increase in workload, it has failed what sort of test?
9	Process of monitoring computer systems/networks and replacing or updating hardware and software as required
10	Processes and procedures in place to ensure that hackers do not access a system, steal data or spread malware
11	Set of procedures used after a significant event such as a fire, flood or ransomware attack causes major business disruption

Threats to data (B1) (Match Up)

1	A network of computers infected with malicious software, often responsible for carrying out DDoS attacks and sending spam
2	Attack whereby a website or network is flooded with traffic in a deliberate attempt to bring it down
3	Collection of software that hides its existence (or the existence of other software) and enables access to restricted parts of a computer system
4	Hacker who attempts to hack into systems for criminal reasons to steal data or extort money
5	Impersonating a trusted person or organisation in order to steal data or manipulate the user of a system
6	Malicious software transferred to and executed on a machine to damage or disrupt the system, or to allow unauthorised access
7	Malware that pretends to function as legitimate software
8	Malware that replicates itself to spread throughout a computer system
9	Malware that restricts a user's access to their computer system to make them give money to the attacker
10	Malware that spreads by injecting its code into other files on the computer system
11	Manipulating the users of a system in order to steal data or gain unauthorised access
12	Software that collects data from a computer system
13	Spying on governments and businesses to obtain secrets / trade secrets / intellectual property, including access and data theft by hackers

User interface design; users and efficiency (A2 - A

How hardware and software is designed for people with disabilities to use with ease
Function that populates previously used data into web forms to save the user needing to type it in full
A trail on a web page showing each level that you have visited, e.g. home > products > books > fiction
Some users have ____ needs for software design; for example, those with developmental delays or other learning disabilities
Ensures that each page within an interface has the same layout, headings and style so that it is easy to navigate, and looks professional
Type of font which looks attractive, but can be difficult to read on a small screen
Words or numbers that are pre-populated in a form (but can be changed); for example a country code for a mobile phone number
Particular subsection of information (e.g. by age, income level, location, etc.)
When a button or menu is pressed or clicked, the menu expands to show more selectable options
Presentation standards used for all documents produced by an organisation
Small, clickable images, representing real-world objects, used in user interfaces
Letting the user know that what they've done has been recognised by the system – a tick or a success box might appear
A system is created that is easy to use without much learning – such as obvious icons, help features and consistent layout
More than one key pressed at the same time to perform an action on a computer, e.g. Control + C for copy
The way that text, graphics, buttons and other parts of the user interface are arranged on screen
Type of font which is well-suited to on-screen use, for example Arial or Helvetica
A box within an interface or web page that a term or phrase is typed in entered in order to find relevant results
Expert, regular or novice – not everyone will be as familiar with using the software or interface
Recognisable shapes and characters which give meaning; for example a green tick is often used to indicate a strong password
A rough or smooth paper surface, a print effect, or an on-screen effect to make the page appear like fabric, stone or crumpled paper, etc.
A small square or circle that can be clicked to select an option within a user interface
An on/off switch, typically used to enable or disable a particular setting
If you change something by mistake or you wish you hadn't made the change, you can reverse the change
Areas of the screen without text or images, required so that the information on the screen is readable and uncluttered

Project planning techniques (B1) (Table Fill)

Iterative methodology where small aspects of the project are prioritised into stages, allowing the client to request changes throughout
The sequence of tasks represented as nodes; each node shows the earliest start time and latest finish time that will lead to the project being completed
Mind map expanded with text in order to provide greater detail about each task
Visual representation of when tasks need to be performed and how much time each task will take
Methodology where each stage is assessed in a cycle and if not correct or needs further work, goes back to a previous stage
The tasks completed in order to complete a project – e.g. could have a clear order or an iterative approach
Visualisation that will remain objective and branches off into each of the sub-objectives and tasks that need to be carried out to complete them
A visual display of images, themes, colours, etc. normally on a single piece of paper; can be constructed physically or digitally
Visual representation of a project's milestones, and the tasks that need to be done to reach one milestone after another
A wide range of software that you can use to set out and manage a project and its tasks
Written series of actions and steps that need to be completed – e.g. within a day, or to complete a project
Type of methodology where the tasks are linear – one after the other, not iterative

Project planning and initial design (B2 - B3) (Table Fill)

How well a product caters to users with additional needs
A well-designed application or interface will make people want to use it, and they will pay ____ to it
Person or people who the final product could be aimed at
A limiting factor within a project; for example the time, expertise or other resources available
Taking into account risks when planning so that setbacks can be handled
Task that can't be completed until the previous task or stage is complete
The ways that a user needs to interact with the product to enter data, such as typing or swiping a screen, are ____ requirements
At the end of a ____ the process is measured; if not successful or refinement is necessary, the process goes back a stage for improvement
Important stage in a project's timeline
The data processed by a computer system that gives the user the information they require
Everything that must be considered and incorporated into a project such as what the users need and the inputs and outputs
A visualisation of the end product - e.g. how it should look; where the different components, icons and menus should be located
Objectives set for the project that are specific, measurable, achievable and realistic, and have a well-defined timescale
A complex application or interface will need a lot of learning in order to master it and, therefore, ____ of how to use it
Series of sketches showing how the user should interact with a product
The schedule for ensuring that the product works as expected and that bugs are found and fixed, giving a timeframe for this process
The expected length of a project - e.g. in hours, days, weeks
If the person or people for whom the product was developed is/are comfortable using the product and can easily use it without ____ help or feeling patronised
Considerations that the client needs to discuss with the developer to ensure that people can successfully ____ the system or software
Graphical representation of how a product should look or be used (e.g. a sketch or storyboard)

INSPECTION COPY

COPYRIGHT
PROTECTED

Develop and review a user interface (C1 - C3) (Table F1)

The users of the user interface who have different needs, skill levels and of different demographics
Limitations placed upon on the interface such as development time (budget) and hardware or software that the interface runs upon
Written evidence of changes to the interface, how it works, and the underlying code to teach users and future developers
How complicated a product is to operate
Small part of or an ability within an application or interface that is useful, e.g. printing or other services
Touch, mouse clicks and typed characters from the user in order to interact with the interface
Method of refining the user interface following rounds of feedback from testers including that the developer / client approves of the changes
Improvements discovered during the development of a project that can be applied to the next project in a better way or more efficiently
Visual and behavioural aspects of a user interface
The collection and ordering of tasks and ways of working on a project to create, refine, document and deliver the user interface
The way that a user interacts with the product in order to click or select, and move from one screen to another
On-screen, tactile or auditory messages provided to the user from the interface
The reasons for the development of the interface, and the different aspects within it
Improvement to an application or interface based on user feedback or testing
Comments, criticisms and suggested improvements provided by the people using the product
Needs of those who operate the interface, such as performing required tasks in an intuitive way

Data and information: characteristics, representati

- A3) (Table Fill)

What information relates to – e.g. a grade of 83% in a test is a B grade because the grade is between 80% and 90%
Raw unprocessed numbers or text with no meaning or context stored on a computer system
Method of verification where two sets of input are entered; the computer checks that both sets match each other and if not reports any errors
A diagram showing the relationship between values
Combination of text and diagrams to present or summarise information or a process in a graphical way that is easy to understand
Data that has been processed so its meaning can be understood and has context
Validation technique that checks that a value meets an expected number of characters
Form of validation where an entry is compared against values in another table
If data has both structure and context, we can infer the ____
Integers, fractions and decimals are examples of this type of data
Validation technique that checks that some value is present
How information becomes an output from data
Text is checked through for mistakes – typos, poor grammar or unclear meaning – by a person, who then corrects any problems
Validation technique that checks that a value is between a specified minimum and maximum value
The way that the data is laid out or coded, e.g. in columns, or separated so that each unique piece of data is identifiable
Columns and rows of labelled data that can include numbers and text to present information in context
Data type used to store a string of characters
Validation method to confirm that a value is classified as the correct type – e.g. text, percentage, date
Process of checking that the input conforms to predefined rules
Entering data more than once to ensure the entries are the same

INSPECTION COPY

COPYRIGHT

Data and information: collection, quality, modelling

(Table Fill)

Measure of how correct data is
Measure of how old data is
Data sets that are too large to be processed by conventional means
Large-scale, official data collection about people living in a country – usually takes place once every 10 years in the UK
The way that the data has been obtained – e.g. survey, interview, panel, sensor, feedback form, online form
Measure of how comprehensive data is
Methods used to obtain data – including data that's never existed before, or data that someone else collected for a different purpose
Online shopping transactions where products are delivered to your home, or downloaded as digital content
Wrongful or criminal deception resulting in financial or personal gain, e.g. identity theft, or using stolen credit cards
Felt when businesses appear to build up a substantial profile about our personal lives or habits, or ask us for substantial personal data
Retailers do not keep much spare stock on site. Instead, stock levels are constantly monitored, and items are sent to the store when they are about to run out.
Rewards programme offered by companies to encourage customer purchases and collect customer data
Analysing data sets to see whether there are relationships between them, or seeing how changing a component affects the outcome or forecast
New data collected for a purpose – such as a student completing a door-to-door survey, or the results of a focus group
The number of data sets that have been collected, e.g. the number of people who data has been collected about
Data collected by someone else (third party) for a different purpose, e.g. customer data from a retailer provided to an advertiser
The organisation type that uses data modelling – e.g. retail, education, finance
Device designed to collect data from environmental changes
An online platform where users connect with other people to share updates, comments and photos, and send messages to each other
Collective term for a range of issues posed by data storage – such as invasion of privacy, and fraud when stored data is stolen
Types of people who are less aware of risks, e.g. more at risk of fraud, such as the elderly or people with learning issues

INSPECTION COPY

**COPYRIGHT
PROTECTED**

Data processing methods (B1) (Table Fill)

Type of cell reference that remains constant even when a formula is copied or moved to another cell
A note giving further detail or an action linked to a cell in a spreadsheet
Colour coding, data bars, etc. automatically generated based on the value or contents of a cell, allowing fast visualisation of the data (e.g. turn cell red if value >90%)
Function that adds up the number of cells that contain a value (i.e. are not blank)
Function that adds up the number of cells that do not contain a value (i.e. are blank)
Function that returns the number of cells in a given range that satisfy a given condition
Involves testing that the input data meets criteria to set rules and is reasonable
Reducing the amount of visible data to a specific category, such as cells in a column which contain a specified value
Expressions that set the value of a cell by connecting the various cells within the spreadsheet
The header row or first column is always visible, no matter where in the spreadsheet you are, so that you always see the column titles
Rows or columns that have been removed from view from the user, but remain in the spreadsheet
Function that returns the value from a given row when a value from the first row is specified
Carries out one action if a given expression is true, or else carries out an alternative action
Copy data between different places – e.g. from a spreadsheet, file or the Internet into a word processor or database, etc.
A spreadsheet can have many different sheets. A formula in one sheet can pull through and analyse data from a different sheet.
Type of operator that involves arguments or reasoning; NOT, AND and OR are examples
A set of actions that can be recorded or coded to automate tasks that are repeated often
Type of cell reference that changes when a formula is copied or moved to another cell
Arranging a column of data in ascending or descending order – e.g. by smallest to largest or in alphabetical order
When a function is run on a block of text, e.g. left or right
Function that adds all numbers in a range of cells that satisfy a given condition
Function that returns the value from a given column that is in the same row as a given value from another given column

INSPECTION COPY

PROTECTED**

Produce a dashboard (B2) (Table Fill)

Found next to the horizontal and vertical lines on a graph so that we know which data is shown and any units (e.g. height (m) and number of people)
The outline around a cell – the colour and thickness can be changed, or it can be invisible
The total number of specified cells that contain some data; can be represented on a dashboard
Presentation of the key data on a dashboard (such as totals, subtotals or other synopsis), allowing it to be seen immediately
When a button on a menu is pressed or clicked, the menu expands to show more selectable options
Values out of 100 – e.g. a dashboard might say that 75% of yesterday's customer calls were answered within five minutes
Table in a spreadsheet which assists with management analysis
Used where there are two or more selectable options from which a single selection is required
The colouring, gradient or cross-hatching of a cell's background
Values can be changed by pressing up or down arrows – e.g. volume control
Square or circle that can be checked on or off by clicking within it
Heading at the top of a page, section of a document or chart which indicates what the text or chart is going to cover
Sum of all data

INSPECTION COPY

Draw conclusions and review data presentation methods

An outlier on a graph – such as an extreme storm showing on a rainfall graph
When data is not fully accurate in the way it was collected, e.g. focusing on a specific viewpoint or based on the time it was collected
Visual often produced in spreadsheet software, e.g. pie, bar, line, etc.
A summary at the end of a report which highlights the key points and may propose future actions
Visual representation of data allowing real-time at-a-glance progress and target monitoring
Structured amount of raw facts, what can be processed and analysed by a computer to draw conclusions
Incorrect data because it was not recorded properly, or was not correctly coded when the data was input
Occurs when data is not correctly interpreted, or data and statistics are displayed or presented so that they do not reflect reality
A graph showing an increase in sales of sun cream every summer would demonstrate a ____ on the graph
Graphs and dashboards can be used to make ____ such as when to send stock to a store, or when busy times will necessitate more staff
Type of advertising which is aimed at a specific audience/demographic
Direction of travel shown on a graph – e.g. general increase or decrease

Modern technologies (A1) (Table Fill)

Controlling what permissions each user (or group of users) is given (e.g. allowing only admins to view a certain folder)
A temporary wireless network that does not rely on fixed hardware such as routers, e.g. a personal hotspot created using a mobile phone
Area without mobile phone coverage – e.g. a valley surrounded by high mountains
Using online services instead of local applications – e.g. editing a document from a web browser
Data storage technology where data is stored on remote servers accessed from the Internet
Software that allows several people to communicate online or share and edit documents (sometimes simultaneously)
If a new system does not work with existing software it has failed what sort of test?
Processes and procedures in place to ensure that hackers do not access a system, steal data or spread malware
Set of procedures used after a significant event such as a fire, flood or ransomware attack causes major business disruption
Process of monitoring computer systems/networks and replacing or updating hardware and software as required
Small on-screen message alerting the user to some information, for example, a software update becoming available
A wireless Internet connection provided for public use – e.g. provided by a café or restaurant for its customers (and may have no password required to connect)
Ensuring that services and systems are working as expected and at the right speed
If, when evaluating a system, it is found not to be able to deal with an increase in workload, it has failed what sort of test?
When files and applications held on two devices are updated to make sure that both devices have the same content
Sharing of a mobile phone's data connection with another device such as a laptop

INSPECTION COPY

PROTECTED**

Impact of modern technologies (A2) (Table Fill)

A description of an image on a page so that screen readers can read out a description of the image
Travel to and from your place of work – eliminated when working from home!
Electronic form of messaging sent between individuals, employees, businesses and customers; sometimes with attachments or other media
For most people, working with and collaborating with others relieves boredom and is stimulating, improving their _____ - _____
Software for setting up the tasks for a project, allowing for teams to manage their time, helping to ensure that milestones and targets are achieved
Otherwise called a direct message, a message sent between two users of social media that nobody else can see
Working away from the office such as at home
An application which narrates the content of a computer display, used by people with limited or no sight
Online platforms, used by individuals and organisations, which facilitate sharing of information and media, and the building of online communities
Form of spoken communication either in person, over the phone, or VOIP
A collection of webpages hosted on the WWW to present information about an individual or organisation to its followers
A group of people working on a shared project who are located in different locations and, therefore, time zones and cultures

Threats to data (B1) (Table Fill)

Hacker who attempts to hack into systems for criminal reasons to steal data or extort money
A network of computers infected with malicious software, often responsible for carrying out DDoS attacks and sending spam
Attack whereby a website or network is flooded with traffic in a deliberate attempt to bring it down
The duration that systems are not operational, e.g. if taken offline to investigate a security breach
Spying on governments and businesses to obtain secrets, trade secrets / intellectual property, including access and data theft by hackers
Type of threat posed by someone outside of an organisation, for example a hacker
Type of threat posed by someone within an organisation, for example, an employee unintentionally installing a virus
When an employee deliberately discloses confidential information outside of their organisation
Malicious software transferred to and executed on a machine to damage or disrupt the system, or to allow unauthorised access
Type of attack that redirects users from a legitimate website to a fake website designed to steal their data
Impersonating a trusted person or organisation in order to steal data or manipulate the user of a system
Malware that restricts a user's access to their computer system to make them give money to the attacker
Collection of software that hides its existence (or the existence of other software) and enables access to restricted parts of a computer system
Watching somebody as they enter data, such as passwords, into a system
Manipulating the users of a system in order to steal data or gain unauthorised access
Software that collects data from a computer system
Stealing of data from a company server by an employee (internal threat) or an outside hacker
Malware that pretends to function as legitimate software
Malware that spreads by injecting its code into other files on the computer system
Malware that replicates itself to spread throughout a computer system

INSPECTION COPY

**COPYRIGHT
PROTECTED**

Prevention and management of threats to data (B2)

Software used to identify and remove malware
If you need to type in your address, some of the fields might appear pre-populated if you've typed in your address before
Copy of data that can be used to restore data if the original copy is lost, corrupted or destroyed
Use of personal identifiable features to grant access to a system, e.g. fingerprints, iris, voice
Restoration of files from backups following a malware attack or a failed drive is called _____
Scrambling data so that it can only be read by _____ with the appropriate translation 'key'
Testing the security of a system by attempting to break into it with the owner's permission
Hardware- or software-based security which controls incoming and outgoing network traffic based on predefined rules
Hacker who attempts to gain access to computer systems – doesn't exploit weaknesses and informs the owner, but without prior permission
General term applied to devices which have been designed or modified to prevent intrusion by hackers or malware
Sequence of characters needed to gain access to a system
Process of testing a system for vulnerabilities that a hacker could exploit
The protection of digital devices from physical threats such as theft, e.g. a biometric door lock
Using more than one characteristic in order to verify a transaction – such as sending a text message or email, or requiring a card / card reader
A security expert hired to find weaknesses in a system's security and fix them

INSPECTION COPY

COPYRIGHT
PROTECTED

IT policy and responsible use (B3, C1) (Table Fill)

Apps and programs which the company allows to be installed on its computers and devices
Set of rules which govern or restrict the ways in which a computer system or network may be used
The last phase after an attack – updating procedures and policy to ensure that an attack is less likely to happen again
Method of sharing and making document/information accessible via email, online, etc. without printing it
Various forms of power required to manufacture a device, use it and dispose of it
Term used to describe the moral principles that regulate human behaviour – e.g. this is considered when using/processing sensitive personal data
Term for a document or page that has been printed
After an attack, the first stage is to ____ – to see what happened and how bad the attack was
After an attack, companies need to ____ it – by containing the problem and implementing suitable procedures
Length, numbers and special characters required to log in are determined by the provider's _____
Settings that reduce energy used by a device such as dimming and switching off the screen, entering standby if device not used for a while, etc.
Increased digital surveillance and the rise of social media have led to concerns relating to this
Metals and minerals required to manufacture electronics and other goods, only found in limited quantities or in certain geographical areas
After an attack, businesses ____ by implementing their disaster plan and taking remedial action
When a device can't be upgraded any further and is still too slow or old, or becomes obsolete
After an attack, the company needs to ____ – telling stakeholders and authorities (e.g. the ICO) what happened
Process where existing technology is replaced with newer or higher-performance technology
Material left over from manufacturing a product or the product itself upon reaching end of life – needs to be recycled or disposed of

INSPECTION COPY

**COPYRIGHT
PROTECTED**

Legal and ethical (C2) (Table Fill)

Document signed by an employee or service user that governs how they may and may not use a computer system
What is covered by an acceptable use policy – e.g. equipment and data owned by a company
When IP belonging to someone else is used, but the licence terms state that the creator's name is included within the work – e.g. Creative Commons
Small text file saved on a computer when a website is loaded, storing pages visited and details to personalise the experience
A legal right protecting the use of paper and digital intellectual property
Act that makes provision for the regulation of the processing of information relating to individuals
Person whom the data is about
Creative work belonging to a person or organisation and protected by legislation
The legal basis for holding and using personal data
Laws or acts which businesses must adhere to
When a fee is paid to the copyright holder to obtain the right to use or distribute content
An organisation watching employee behaviour – e.g. usage time, emails sent and websites visited
All traffic on the Internet is treated with equal importance/priority – specific types of traffic cannot be slowed down
Grants the exclusive rights to a person to use a specific design or invention
When someone wants to use a copyrighted image or quote within their work – and the author allows it
Set of actions specific to a particular industry that are widely agreed but not legally enforceable
Collective term for the actions taken against an employee if the acceptable use policy is breached
Who an acceptable use policy refers to
Online platforms, used by individuals and organisations, which facilitate sharing of information and the building of online communities
Why personal data is collected
Sets of guidelines that companies agree to adhere to (but don't have to), e.g. World Wide Web Consortium, Unicode Consortium
A word or phrase used by a company to identify a brand or product – may display the ™ symbol or ® if registered

INSPECTION COPY

**COPYRIGHT
PROTECTED**

Forms of notation (D1) (Table Fill)

A term for a graph where tabulated data is displayed graphically
Yes or no, for example - diamond on a flow chart
A person who processes or alters data in a data flow diagram
Graphical method of representing an algorithm or process
Representation showing who processes data and how it is stored and transmitted within a system
These are both represented by a parallelogram in a flow chart
Represented in a rectangular box on a flow chart
Repository for processed data within a data flow diagram - a data ____
Representation of inputs, processes and outputs within a system or business
Data provided in rows and columns for clarity and the ability to spot trends and patterns
Start and end of a flow chart, represented in an oval shape
Data or text that has been analysed and discussed in continuous prose

User interfaces (A1)

CONTROLLING DEVICE	An electronic system that manages another system without the need for human input
EMBEDDED SYSTEM	A computer system that forms part of a larger system
EMERGING	Newly developed technology such as wearable devices
FORM	An aspect of a user interface which enables the user to interact with the system
GUI	Acronym for any interface that enables interaction with a system using icons and other visual features
HARDWARE	The physical parts that make up a computer system
MENU	A list of words (e.g. at the top of a screen) that allow users to select options to be selected
SENSOR	A device designed to collect data from environmental conditions
SOFTWARE	Enables users to use a computer to complete tasks
TEXT INTERFACE	Non-graphical interaction with a computer such as a command line operating system or terminal window
USER EXPERIENCE	Refers to the quality of a user's interaction with a system or application
USER INPUT	Human interaction with a device, traditionally using a mouse and keyboard but now including voice control and gestures
USER INTERFACE	Software that allows interaction between the user and the system
USER REQUIREMENTS	Conditions that the client needs the product to meet
WIMP	Acronym for windows, icons, menus and pointer

PROTECTED

User interface design; users and efficiency (A2 - A

ACCESSIBILITY	How hardware and software is designed for people with disabilities to use with ease
AUTOFILL	Function that populates previously used data in a form so the user does not need to type it in full
BREADCRUMBS	A trail on a web page showing each level that you are in: products > books > fiction
COGNITIVE	Some users have cognitive needs for software design due to developmental delays or other learning disabilities
CONSISTENCY	Ensures that each page within an interface has the same layout and style so that it is easy to navigate, and look professional
DECORATIVE	Type of font which looks attractive, but can be difficult to read on screen
DEFAULT VALUES	Words or numbers that are pre-populated on a form, for example a country code for a mobile phone number
DEMOGRAPHIC	Particular subsection of a population (e.g. by age group)
DROPDOWN LIST	When a button on a menu is pressed or clicked, a list of more selectable options appears
HOUSE STYLE	Presentation standards used for all documents in an organisation
ICONS	Small, clickable images, representing real-world objects, used in interfaces
INFORMATIVE FEEDBACK	Letting the user know that what they've done has been successful in the system – a tick or a success box might appear
INTUITIVE DESIGN	A system is created that is easy to use without the need for obvious icons, help features and consistent layout
KEYBOARD SHORTCUT	More than one key pressed at the same time to perform an action on a computer, e.g. Control + C for copy
LAYOUT	The way that text, graphics, buttons and other elements are arranged on screen
SANS SERIF	Type of font which is well-suited to on-screen use, e.g. Helvetica
SEARCH FIELD	A box within an interface or web page that a user can enter text in order to find relevant content results
SKILL LEVEL	Expert, regular or novice – not everyone will be able to use a software or interface
SYMBOLS	Recognisable shapes and characters which give meaning, e.g. a green tick is often used to indicate a strong password
TEXTURE	A rough or smooth paper surface, a print effect, or a pattern that makes the page appear like fabric, stone or crumpled paper
TICK BOX	A small square or circle that can be clicked to select an option in an interface
TOGGLE	An on/off switch, for example, to enable or disable a feature
UNDO	If you change something by mistake or you wish to revert to a previous state, you can reverse the change
WHITE SPACE	Areas of the screen without text or images, reserved for content on the screen is readable and uncluttered

Project planning techniques (B1)

AGILE	Iterative methodology where small aspects of project are broken down into stages, allowing the client to request changes
CRITICAL PATH	The sequence of tasks represented as nodes; earliest start time and latest finish time that will lead to project completion
DESCRIPTION	Mind map expanded with text in order to provide details of each task
GANTT CHART	Visual representation of when tasks need to be done and how long each task will take
ITERATIVE	Methodology where each stage is assessed in a cycle and if it needs further work, goes back to a previous stage
METHODOLOGIES	The tasks are completed in order to complete a project, but can be done in an iterative approach
MIND MAP	Visualisation that shows the main objective and sub-objectives and the tasks that need to be carried out
MOOD BOARD	A visual display of images, themes, colours, etc. used to inspire a design; can be constructed physically or digitally
PERT	Visual representation of a project's milestones and the tasks that need to be done to reach one milestone after another
PLANNING TOOLS	A wide range of software that you can use to set up a project plan and its tasks
TASK LIST	Written series of actions and steps that need to be completed each day, or to complete a project
WATERFALL	Type of methodology where the tasks are linear and sequential, not iterative

INSPECTION COPY

COPYRIGHT
PROTECTED

Project planning and initial design (B2 - B3)

ACCESSIBILITY	How well a product caters to users with additional needs
ATTENTION	A well-designed application or interface will make sure that users know what they will pay ___ to it
AUDIENCE	Person or people who the final product could be used by
CONSTRAINT	A limiting factor within a project; for example the time or resources available
CONTINGENCY	Taking into account risks when planning so that you can deal with them
DEPENDENCY	A task that can't be completed until the previous task has been completed
INPUT	The ways that a user needs to interact with the system. For example, as typing on a keyboard or touching a screen, are ___ requirements
ITERATIVE REVIEW	At the end of a stage, the success is measured; if it is not successful, refinement is necessary, the project goes back to the start
MILESTONE	Important stage in a project's timeline
OUTPUT	The data processed by a computer system that provides the user with the information they require
PROJECT REQUIREMENTS	Everything that must be considered and incorporated into the design, such as what the users need and the inputs and outputs
SKETCH	A visualisation of the end product - e.g. how it should look, what different components, icons and menus should be included
SMART GOALS	Objectives set for the project that are specific, measurable, realistic, and have a well-defined timescale
SPECIALISED KNOWLEDGE	A complex application or interface will need a lot of specialised knowledge to master it and, therefore, ___ of how to use it
STORYBOARD	Series of sketches showing how the user should interact with the system
TEST STRATEGY	The schedule for ensuring that the product works as intended. Bugs are found and fixed, giving a timeframe for this
TIMESCALE	The expected length of a project - e.g. in hours, days, weeks, months
USER CONFIDENCE	If the person or people for whom the product was designed are comfortable using the product and can easily use it without feeling patronised
USER REQUIREMENTS	Considerations that the user needs to discuss with the designer so that people can successfully operate the system
VISUALISATION	Graphic representation of how a product should look (e.g. a sketch or storyboard)

Develop and review a user interface (C1 - C3)

AUDIENCE	The users of the user interface who have different demographics
CONSTRAINTS	Limitations placed upon the interface such as and hardware or software that the interface runs on
DOCUMENTATION	Written evidence of changes to the interface, hidden underlying code to teach users and future developers
EASE OF USE	How complicated a product is to operate
FEATURE	Small part of or an ability within an application such as printing or other services
INPUTS	Touch, mouse clicks and typed characters from the user
ITERATIVE PROCESS	Method of refining a user interface following requests from testers including that the tester / client approves
LESSONS LEARNED	Improvements discovered during the development that are applied to the next project in a better way or more
LOOK AND FEEL	Visual and behavioural aspects of a user interface
METHODOLOGY	The collection and ordering of tasks and ways of how to create, refine, document and deliver the user interface
NAVIGATION METHOD	The way that a user interacts with the product such as move from one screen to another
OUTPUTS	On-screen, tactile or auditory messages provided by the interface
PURPOSE	The reasons for the development of the interface and what it is for within it
REFINEMENT	Improvement to an application or interface based on user testing
USER FEEDBACK	Comments, criticisms and suggested improvements from users using the product
USER REQUIREMENTS	Needs of those who operate the interface, such as how to use it in an intuitive way

Data and information: characteristics, representation - A3)

CONTEXT	What information relates to – e.g. a grade of 83 because the grade is between 80% and 90%
DATA	Raw unprocessed numbers or text with no meaning without a computer system
DOUBLE ENTRY	Method of verification where two sets of input are checked that both sets match each other and if not, the error is corrected
GRAPH	A diagram showing the relationship between variables
INFOGRAPHIC	Combination of text and graphics to present information or process in a graphical way that is easy to understand
INFORMATION	Data that has been processed and whose meaning is clear in context
LENGTH CHECK	Validation technique that checks that a value meets a certain number of characters
LOOKUP	Form of validation where an entry is compared against a table
MEANING	If data has both structure and context, we can give it meaning
NUMERIC	Integers, fractions and decimals are examples of numeric data
PRESENCE CHECK	Validation technique that checks that some value is present
PROCESSED	How information becomes an output from data
PROOFREADING	Text is checked through for mistakes – typos, punctuation, meaning – by a person, who then corrects any problems
RANGE CHECK	Validation technique that checks that a value is within a minimum and maximum value
STRUCTURE	The way that the data is laid out or coded, e.g. in a table so that each unique piece of data is identifiable
TABLES	Columns and rows of labelled data that can include and present information in context
TEXT	Data type used to store a string of characters
TYPE CHECK	Validation method to confirm that all the data is of a certain type – e.g. text, percentage, date
VALIDATION	Process of checking that the input conforms to the requirements
VERIFICATION	Checking data more than once to ensure the entry is correct

Data and information: collection, quality, modelling

ACCURACY	Measure of how correct data is
AGE	Measure of how old data is
BIG DATA	Data sets that are too large to be processed by
CENSUS	Large-scale, official data collection about people that takes place once every 10 years in the UK
COLLECTION METHOD	The way that the data has been obtained – e.g. sensor, feedback form, online form
COMPLETENESS	Measure of how comprehensive data is
DATA COLLECTION	Methods used to obtain data – either new data or data that has been previously collected for a different purpose
E-COMMERCE	Online shopping and transactions where products are bought, sold, or downloaded as digital content
FRAUD	Wrongful or criminal deception resulting in financial loss, identity theft, or using stolen credit cards
INVASION OF PRIVACY	Felt when businesses appear to build up a profile of our personal lives or habits, or ask us for substantial amounts of personal information
JUST-IN-TIME DELIVERY	Retailers do not keep much spare stock on site, but instead constantly monitor sales, and items are sent to the store as they are needed to run out.
LOYALTY SCHEME	Rewards programme offered by companies to encourage repeat purchases and collect customer data
MODELLING	Analysing data sets to see whether there are relationships between variables, or seeing how changing a component affects the overall system
PRIMARY	New data collected for a purpose – such as a street survey, door-to-door survey, or the results of a focus group
SAMPLE SIZE	The number of data sets that have been collected, or the number of people whose data has been collected about
SECONDARY	Data collected by someone else (third party) for a different purpose, e.g. customer data from a retailer provided to an advertiser
SECTOR	The organisation type that uses data modelling, e.g. retail, health, finance
SENSOR	Device designed to collect data from environment
SOCIAL NETWORK	An online platform where users connect with others, share content, images and photos, and send messages to each other
THREATS	Collective term for a range of issues posed by data, e.g. data breach, invasion of privacy, and fraud when stored data is accessed
VULNERABLE GROUPS	Types of people who are less aware of risks, e.g. children, the elderly or people with learning issues

Data processing methods (B1)

ABSOLUTE	Type of cell reference that remains constant even if the cell is copied or moved to another cell
COMMENT	A note giving further detail or an action linked to a cell
CONDITIONAL FORMATTING	Colour coding, data bars, etc. automatically generated based on the contents of a cell, allowing fast visualisation of data (e.g. value >90%)
COUNT	Function that adds up the number of cells that contain a specific value (blank)
COUNTBLANK	Function that adds up the number of cells that are empty (blank)
COUNTIF	Function that returns the number of cells in a given range that meet a given condition
DATA VALIDATION	Involves testing that the input conforms to set criteria
FILTER	Reducing the amount of visible data to a specific range of rows and columns which contain a specified value
FORMULAE	Expressions that set the value of a cell by connecting data from other cells in the spreadsheet
FREEZE PANES	The header row or first column is always visible when scrolling through the spreadsheet you are, so that you always see the same data
HIDDEN	Rows or columns that have been removed from the spreadsheet but remain in the spreadsheet
HLOOKUP	Function that returns the value from a given row in a table where the row is specified
IF	Carries out one action if a given expression is true, and another alternative action if false
IMPORT	Copy data between different places – e.g. from a website or the Internet into a word processor or database, etc.
LINKED WORKSHEET	A spreadsheet can have many different sheets and you can link and pull through and analyse data from a different sheet
LOGICAL	Type of operator that involves arguments or results that are true or false (e.g. AND, OR, NOT) are examples
MACRO	A set of actions that can be recorded or coded to perform a task that is repeated often
RELATIVE	Type of cell reference that changes when a formula is copied to another cell
SORT	Arranging a column of data into ascending or descending order (smallest to largest or in alphabetical order)
STRING	When a function is run on a block of text, e.g. length, upper case, etc.
SUMIF	Function that adds all numbers in a range of cells that meet a given condition
VLOOKUP	Function that returns the value from a given row in a table where the value is specified as a given value from another given column

Produce a dashboard (B2)

AXIS LABELS	Found next to the horizontal and vertical lines which data is shown and any units (e.g. height (m))
BORDER	The outline around a cell – the colour and thickness can be invisible
COUNT	The total number of specified cells that contain a certain value, represented on a dashboard
DATA SUMMARY	Presentation of the key data on a dashboard (such as a synopsis), allowing it to be seen immediately
DROPDOWN MENU	When a button on a menu is pressed or clicked, more selectable options are shown
PERCENTAGES	Values out of 100 (e.g. a dashboard might say 'customer enquiries were answered within five minutes') 
PIVOT TABLE	A table in a spreadsheet which assists with managing data
RADIO BUTTON	Used where there are two or more selectable options and only one selection is required
SHADING	The colouring, gradient or cross-hatching of a cell
SPINNER	Values can be changed by pressing up or down arrows
TICK BOX	Square or circle that can be checked on or off by clicking
TITLE	Heading at the top of a page, section of a document or chart, what the text or chart is going to cover
TOTAL	Sum of all data

Draw conclusions and review data presentation me

ANOMALY	An outlier on a graph – such as an extreme store
BIAS	When data is not fully accurate in the way it was collected, due to a specific viewpoint or based on the time it was collected
CHART	Visual representation of data often produced in spreadsheet software
CONCLUSION	A summary at the end of a report which highlights findings and propose future actions
DASHBOARD	Visual representation of data allowing real-time monitoring and target monitoring
DATA SET	Structured amount of raw data, what can be processed by a computer to draw conclusions
ERROR	Incorrect data because it was not recorded properly or because of a mistake when the data was inputted
MISREPRESENTATION	Occurs when data is not correctly interpreted, displayed or presented so that they do not reflect the actual data
PATTERN	A graph showing an increase in sales of sun cream over a period of time demonstrate a <u>positive trend</u> on the graph
RECOMMENDATIONS	Graphs and dashboards can be used to make <u>informed decisions</u> to a store, or when busy times will necessitate <u>staffing levels</u>
TARGETED	Type of advertising which is aimed at a specific audience
TREND	Direction of travel shown on a graph – e.g. general increase

Modern technologies (A1)

ACCESS RIGHTS	Controlling what permissions each user (or group) has (e.g. allowing only admins to view a certain folder)
AD HOC	A temporary wireless network that does not require a central router, e.g. a personal hotspot created using a mobile phone
BLACK SPOT	Area without mobile phone coverage – e.g. a valley between mountains
CLOUD COMPUTING	Using online services instead of local applications, accessed from a web browser
CLOUD STORAGE	Data storage technology where data is stored on servers accessed from the Internet
COLLABORATION TOOLS	Software that allows several people to communicate and work on documents (sometimes simultaneously)
COMPATIBILITY	Does a new system work with existing software or hardware? If not, what sort of test?
DATA SECURITY	Processes and procedures in place to ensure that data is not lost, stolen, system, steal data or spread malware
DISASTER RECOVERY POLICY	Set of procedures used after a significant event (e.g. a ransomware attack) causes major business disruption
MAINTENANCE	Process of monitoring computer systems/networks and updating hardware and software as required
NOTIFICATIONS	Small on-screen message alerting the user to something important, e.g. a software update becoming available
OPEN WI-FI	A wireless Internet connection provided for public use (e.g. a café or restaurant for its customers (and may be free to connect))
PERFORMANCE	Ensuring that services and systems are working at the required speed
SCALABILITY	If, when evaluating a system, it is found not to be able to handle an increase in workload, it has failed what sort of test?
SYNCHRONISATION	When files and applications held on two devices are kept up to date so that both devices have the same content
TETHERING	Sharing of a mobile phone's data connection with another device (e.g. laptop)

Impact of modern technologies (A2)

ALT TEXT	A description of an image on a page so that screen readers can provide a description of the image
COMMUTE	Travel to and from your place of work – eliminated by remote working
EMAIL	Electronic form of messaging sent between individuals, businesses and customers; sometimes with attachments
MENTAL WELL-BEING	For most people, working with and collaborating with others is stimulating and is not boring, improving their mental well-being
PLANNING TOOL	Software for setting up the tasks for a project, managing their time, helping to ensure that milestones are met
PRIVATE MESSAGE	Otherwise called direct message, a message sent to a person on social media that nobody else can see
REMOTE WORKING	Working away from the office such as at home
SCREEN READER	An application which narrates the content of a page for people with limited or no sight
SOCIAL MEDIA	Online platforms, used by individuals and organisations for the sharing of information and media, and the building of relationships
VOICE	Form of spoken communication either in person or via a telephone
WEBSITE	A collection of webpages hosted on the WWW, accessible by an individual or organisation to its followers
WORLD TEAMS	A group of people working on a shared project via different locations and, therefore, time zones and cultures

Threats to data (B1)

BLACK HAT	Hacker who attempts to hack into systems for or extort money
BOTNET	A network of computers infected with malicious software for carrying out DDoS attacks and sending spam
DENIAL OF SERVICE	Attack whereby a website or network is flooded with traffic in an attempt to bring it down
DOWNTIME	The duration that systems are not operational following an attempt to investigate a security breach
ESPIONAGE	Spying on governments and businesses to obtain confidential information, including access and data
EXTERNAL	Type of threat posed by someone outside of an organisation
INTERNAL	Type of threat posed by someone within an organisation, such as an employee unintentionally installing a virus
LEAKING	When an employee deliberately discloses confidential information to their organisation
MALWARE	Malicious software transferred to and executed on a system to disrupt the system, or to allow unauthorised access
PHARMING	Type of attack that redirects users from a legitimate website to a website designed to steal their data
PHISHING	Impersonating a trusted person or organisation to trick users into manipulating the user of a system
RANSOMWARE	Malware that restricts a user's access to their files until they give money to the attacker
ROOTKIT	Collection of software that hides its existence (often used to install other software) and enables access to restricted parts of a system
SHOULDER SURFING	Watching somebody as they enter data, such as a password
SOCIAL ENGINEERING	Manipulating the users of a system in order to gain access to unauthorised access
SPYWARE	Software that collects data from a computer system without the user's knowledge
THEFT	Stealing of data from a company server by an employee or an outside hacker
TROJAN HORSE	Malware that pretends to function as legitimate software but actually contains malicious code
VIRUS	Malware that spreads by injecting its code into a host system
WORM	Malware that replicates itself to spread through a network

Prevention and management of threats to data (B2)

ANTIVIRUS	Software used to identify and remove malware
AUTOCOMPLETE	If you need to type in your address, some of the populated if you've typed in your address before
BACKUP	Copy of data that can be used to restore data if corrupted or destroyed
BIOMETRICS	Use of personal identifiable features to grant access like fingerprints, iris, voice
DATA RECOVERY	Restoration of files from backups following a hard drive is called _____
ENCRYPTION	Scrambling data so that it can only be read by using a translation key
ETHICAL HACKING	Testing the security of a system by attempting to gain the owner's permission
FIREWALL	Hardware- or software-based security which controls network traffic based on predefined rules
GREY HAT	Hacker who attempts to gain access to computer systems, finds weaknesses and informs the owner, but without permission
HARDENING	General term applied to devices which have been configured to prevent intrusion by hackers or malware
PASSWORD	Sequence of characters needed to gain access to a system
PENETRATION TESTING	Process of testing a system for vulnerabilities by simulating an attack
PHYSICAL SECURITY	The protection of digital devices from physical damage, theft, biometric door lock
TWO-FACTOR AUTHENTICATION	Using more than one characteristic in order to verify identity, such as sending a text message or email, or requiring a password
WHITE HAT	A security expert hired to find weaknesses in a system and report them

IT policy and responsible use (B3, C1)

ACCEPTABLE SOFTWARE	Apps and programs which the company allows on its computers and devices
ACCEPTABLE USE POLICY	Set of rules which govern or restrict the ways in which a network may be used
ANALYSE	The last phase after an attack – updating procedures so that an attack is less likely to happen again
ELECTRONIC DISTRIBUTION	Method of sharing and making document/information available online, etc. without printing it
ENERGY	Various forms of power required to manufacture or use a device
ETHICS	Term used to describe the moral principles that should be considered when using/processing personal data
HARD COPY	Term for a document or image that has been printed
INVESTIGATE	After an attack, the first stage is to investigate – to see what the attack was
MANAGE	After an attack, companies need to manage it – by carrying out implementing suitable procedures
PASSWORD POLICY	Length, numbers and special characters required for a password the provider's password policy
POWER SAVING	Settings that reduce energy used by a device such as turning off the screen, entering standby if device not used
PRIVACY	Increased digital surveillance and the rise of social media has raised concerns relating to this
RARE MATERIALS	Metals and minerals required to manufacture electronic devices are only found in limited quantities or in certain geographical areas
RECOVER	After an attack, businesses recover by implementing procedures and taking remedial action
REPLACING	When a device can't be upgraded any further and is replaced becomes obsolete
RESPOND	After an attack, the company needs to respond – tell the relevant authorities (e.g. the ICO) what happened
UPGRADING	Process where existing technology is replaced by newer performance technology
WASTE	Materials left over from manufacturing a product or at the end of its life – needs to be recycled or disposed of

Legal and ethical (C2)

ACCEPTABLE USE POLICY	Document signed by an employee or service user and may not use a computer system
ASSETS	What is covered by an acceptable use policy – owned by a company
ATTRIBUTION	When IP belonging to someone else is used, but the creator's name is included within the work
COOKIE	Small text file saved on a computer when a website is visited and details to personalise the experience
COPYRIGHT	A legal right protecting the use of paper and digital content
DATA PROTECTION	Act that makes provision for the regulation of the processing of information relating to individuals
DATA SUBJECT	Person whom the data is about
INTELLECTUAL PROPERTY	Creative work belonging to a person or organisation – covered by legislation
LAWFUL PROCESSING	The legal basis for holding and using personal data
LEGISLATION	Laws or acts which businesses must adhere to
LICENSING	When a fee is paid to the copyright holder to obtain the right to distribute content
MONITORING	An organisation watching employee behaviour and websites visited
NET NEUTRALITY	All traffic on the Internet is treated with equal priority – all types of traffic cannot be slowed down
PATENT	Grants the exclusive rights to a person to use an invention
PERMISSIONS	When someone wants to use a copyrighted image or text – and the author allows it
PROFESSIONAL GUIDELINES	Set of actions specific to a particular industry that are legally enforceable
SANCTIONS	Collective term for the actions taken against a person when a use policy is breached
SCOPE	Who an acceptable use policy refers to
SOCIAL MEDIA	Online platforms, used by individuals and organisations for the sharing of information and media, and the building of relationships
SPECIFIC PURPOSE	Why personal data is collected
STANDARDS	Sets of guidelines that companies agree to adhere to – e.g. World Wide Web Consortium, Unicode Consortium
TRADEMARK	A word or phrase used by a company to identify its products – display the ™ symbol or ® if registered

Forms of notation (D1)

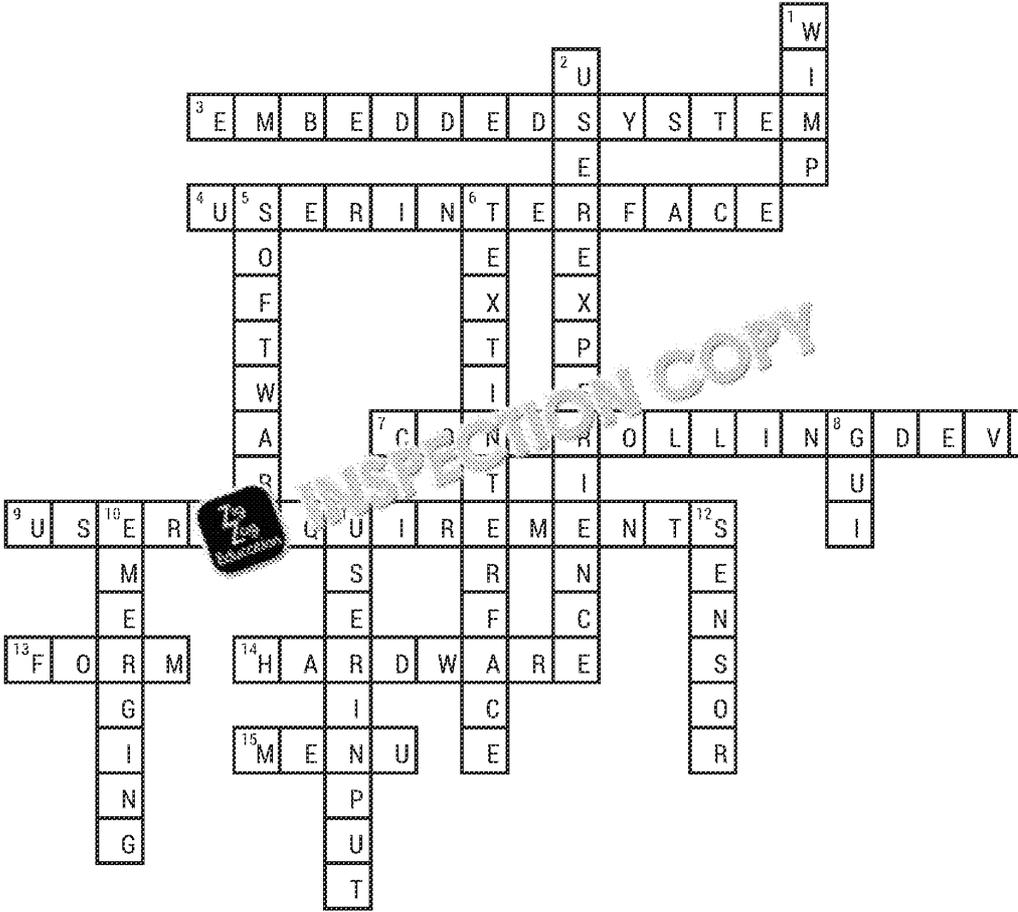

CHART	A term for a graph where tabulated data is displayed
DECISION	Yes or no, for example – diamond on a flow chart
ENTITY	A person who processes or alters data in a data system
FLOW CHART	Graphical method of representing an algorithm
FLOW DIAGRAM	Representation showing who processes data and what is transmitted within a system
INPUT AND OUTPUT	These are both represented by a parallelogram
PROCESS	Represented in a rectangular box on a flow chart
STORE	Repository for processed data within a data flow diagram
SYSTEM DIAGRAM	Representation of the inputs, processes and outputs of a business
TABLE	Data provided in rows and columns for clarity and to show patterns
TERMINATOR	Start and end of a flow chart, represented in an oval
WRITTEN INFORMATION	Data or text that has been analysed and discussed
